VOL. XXVI., No. 11

NEW YORK, MARCH 14, 1903.

WHOLE NUMBER, 673

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents. Foreign postage, \$1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE WABASH INJUNCTION.

MARCH 3, 1903, will stand as an important date in the industrial history of this country (such is the prevailing view), in case the injunction issued in St. Louis on that day by Judge Elmer B. Adams (of the Circuit Court of the United States for the Eighth Circuit in the Eastern District of Missouri) is sustained by the higher courts. "There will be no more railway strikes in this country" if the injunction is so sustained, says the *New York Commercial Advertiser*; and P. H. Morrissey, grand master of the Brotherhood of Railway Trainmen, agrees that "if Judge Adams's order is written into the laws of our country, organization of labor, which is to-day the hope and protection of those who toil, can no longer contribute its beneficent influences in bettering the condition of the working people." The trainmen and firemen on the Wabash road, it appears, had authorized the officials of their unions to make certain demands of the company, and to order a strike if the demands were refused. No agreement was reached, and the company was notified that if the demands were not granted, a strike would be ordered at 5 P.M. on March 3. The company, however, applied to the United States court for an injunction to restrain the men from striking, and Judge Adams granted it. There was no strike, and it is not thought likely that there will be one until the injunction is dissolved. Proceedings for and against such dissolution are now on. The restraining order reads, in part, as follows:

"Whereas, It has been represented to the judges of the Circuit Court of the United States for the Eighth Circuit in the Eastern District of Missouri, in chancery sitting, on the part of the Wabash Railroad Company by its certain complaint against you and each of you, that you are combining and confederating together to order and cause a strike on the part of the employees of the said railroad company, engaged in and about the operation of its trains, as brakemen, switchmen, and firemen, and in interfering with, hindering, obstructing and stopping the business of said railroad company as a common carrier in the United States.

"We, therefore, in consideration thereof and the particular matters in said bill set forth, do strictly command you and each and every one of you, individually and as representatives of the Order of Brotherhood of Railway Trainmen and Brotherhood of Locomotive Firemen, you, and said organizations, representa-

tives, clerks, agents, and attorneys and all others who may be aiding and abetting you or them, or acting in concert with you or them, and under your or their direction, until the further order of this court, absolutely to desist and refrain from in any way or manner ordering, coercing, persuading, inducing, or otherwise causing, directly or indirectly, the employees of the said the Wabash Railroad Company, engaged in or about the operation of its trains within the United States, and brakemen, switchmen, or locomotive firemen to strike or quit the service of said company; and from in any way molesting or interfering with said railroad company's said employees, or with the operation of its trains, or the conduct of its business as a common carrier."

"I do not believe any such injunction can hold," says Senator Depew (for many years attorney, and later president of the New York Central Railroad, and now chairman of the boards of directors of the New York Central, Lake Shore, and Michigan Central Railroads), in a newspaper interview; and Judge M. F. Tuley, of the Appellate Court of Illinois, says:

"Issuing such writs of injunction brings the administration of justice into contempt. It breeds discontent and we will reap the whirlwind some day from the seeds so sown.

"The day may come in the not distant future when the working classes will have political control and will appoint judges who will also issue writs of injunction—in their favor. I see no reason why a writ of injunction should not as well issue against a railroad, enjoining it from discharging an employee or from failing to pay such employees a certain fixed rate of wages.

"We judges are approaching a condition in which the governing power will be exercised by the judges with the executives and legislators as mere figureheads."

W. M. Springer, of Washington, formerly chief justice of the United States Court of Appeals in the Indian Territory, says:

"It has been settled by the highest courts in the country by numerous decisions, and the doctrine is no longer controverted, that workmen or employees possess the right to quit work singly or in a body by preconcert of agreement, provided only that they do not interfere with the rights of others, whether co-employees, employers, or the public.

"They have a right to seek an increase in wages by all peaceable means, and meetings and combinations to that end, if unaccompanied by threats, violence, disorder, or attempts to coerce, are not unlawful. They may agree in a body that they will not work below certain rates, and a strike to this end, unaccompanied by any of the foregoing elements, is not an offense.

"The doctrine laid down by the New York courts is this: 'The law permits workmen at least with a limited territory to combine together and by peaceable means to seek any legitimate advantage in their trade. The increase of wages is such an advantage. The right to combine involves of necessity the right to persuade all collaborators to join in the action.

"This right to persuade collaborators involves the right to persuade new employees to join the combination. This is but a corollary of the 'right of combination.' It is a well-recognized doctrine that the right to issue temporary injunctions should be exercised with great caution, and never except in case of urgent necessity, and where the acts enjoined are unlawful or amount to a nuisance.

"Applying the law as above stated to the language of the injunction issued by Judge Adams, it clearly appears that he has exceeded his authority. The parties against whom the injunction was directed were the authorized representatives of the firemen and trainmen of the railroad company. They had a right as such agents to order a strike. In doing this they were

merely exercising the authority conferred on them by their collaborators.

"They also had the right to persuade their collaborators to desist from work, and they had the lawful right to induce their collaborators and new employees by all peaceable means to desist from work. Hence, in so far as Judge Adams sought by injunction to prevent such acts, he exceeded his authority."

The Chicago *Evening Post* says, in a very positive editorial:

"Involuntary servitude can not be restored in the United States. Even the black man has only been disfranchised, not reenslaved. Labor is free and will remain free, and neither malevolent nor benevolent feudalism will ever be established in this republic. The freedom of labor, among other things, implies the right to strike for any reason whatever, just as the freedom of enterprise implies the right to dismiss employees for any reason or without any reason or explanation. What legislation has not done and will never attempt courts of equity will hardly be permitted to accomplish by indirection. . . .

"As to the alleged grievances of the men, the reasonableness or unreasonableness of their demands, it is unnecessary to express any opinion at this time. The essential point is that they had a perfect legal right to vote as they did, to resolve upon a strike, and to delegate to committees and to officers of their organizations the power to conduct negotiations and to call the strike in the event of failure to reach a settlement. The court steps in and forbids the agents and representatives of the men to do what they were expressly authorized to do by the principals in the case! Is this law? Is this sense? Is this Americanism? . . . The injunction will not stand. It is arbitrary and unwarranted."

The New York *Sun*, however, regards the injunction as entirely proper and reasonable. It says:

"The injunction order as it reads does not interfere with the right of the mechanics or laborers of the Wabash Railway to strike; it only restrains the heads of the Trainmen's Union from coercing, persuading, or inducing the railway employees to strike or quit the service of the company. It leaves, of course, the individual workmen or any number of the workmen to act on their own volition, but it very properly directs outside conspirators to refrain from aiding or abetting a movement of which the intent is to paralyze a great common carrier."

And the New York *Evening Post* takes a similar view. To quote:

"It can not be affirmed that the court in taking this step has

infringed or curtailed the right of the company's employees to desist from work, or their right to act through the Trainmen's Union. It has merely sought to protect the public, including the employees themselves, against a great and sudden calamity—the cessation of traffic on some thousands of miles of railway—until the reasons for it shall have been heard and opportunity given for an adjustment of differences between the company and its operatives. There was a time in the history of labor troubles and labor organization in this country when it was possible for the employees of a railway to desist from work without any warning whatever, and leave passengers stranded midway between stations, or to abandon a cattle-train in a snow-storm, leaving the animals to perish from hunger and cold. The courts put a stop to that kind of strike, and organized labor itself acknowledged the justice of the proceeding, or at all events made no protest against it. No authority was assumed to curtail the liberties of workmen to demand and enforce their rights in an orderly way, not inconsistent with the rights of other members of the community, but merely to postpone hasty action which might work irreparable injury to persons having no share or interest in the dispute. Judge Adams, as we infer, has merely applied this rule to the threatened strike on the Wabash Railway. At all events, his injunction is only temporary, and can not work any serious harm, while it will probably be beneficial even to the leaders of the Trainmen's Union. . . .

"It is most likely that Judge Adams has rendered a valuable service to the Wabash trainmen and firemen by causing a delay in their intended strike. The president of the company says that he is now paying higher wages for firing engines than his competitors pay. If this is the fact, a strike would be an attempt to accomplish the impossible."

Mr. Wells M. Blodgett, vice-president and general counselor of the Wabash road, says:

"The court proceedings are based on the provisions of the interstate commerce law. That act makes it the duty of the railroad companies to receive and transport all kinds of interstate traffic, and requires them to interchange such traffic with each other at connecting points, and any conspiracy on the part of any number of persons to defeat that act, or the provisions of any federal act, is wrong, and renders the parties liable, criminally and civilly. This is not a mere theory; it is the settled law, and the injunction only goes to that extent. Should the order be violated, it will be for the court to say what steps it will take to enforce the order, but we have no reason to believe that any one intends to violate it."

STATEHOOD FAILURE IN CARTOON.

SENATOR L. HEISLER BALL (Rep.),
Of Delaware.

THE DELAWARE ELECTION AND MR. ADDICKS.

J. EDWARD ADDICKS is still treated as the central figure in all the comment on the Delaware senatorial situation, and his prospect of election to the Senate at some future time is the main topic of speculation. James Frank Allee, Mr. Addicks's lieutenant, and Congressman Lewis Heisler Ball (anti-Addicks Republican) were elected to the Senate last week for the long and short terms, respectively, and the Associated Press despatch from Dover announcing the result said that "the election is regarded here as an Addicks victory." It was rumored at first that after the legislature adjourned Senator Allee would resign, and Governor Hunn would appoint Mr. Addicks to fill the vacancy; but all concerned have denied emphatically that such a plan is contemplated. Mr. Addicks says that his next attempt to reach the Senate will be two years hence, when Senator Ball's term will expire. He said to a Philadelphia *Ledger* reporter that he felt sure Senator Allee would resign if he asked him to, and the Senator remarked, "I sincerely regret that I have to fill the place that belongs to Mr. Addicks"; but it appears that Mr. Addicks prefers to wait and get a full term. "I shall aim to elect a legislature two years from now favorable to me," he said. Senator Ball ventured the remark that the present election would bring peace and harmony to the Republican party in Delaware, but Mr. Addicks, upon hearing of it, exclaimed:

"It does not mean peace in the Republican party. It means war to the knife. I am in the fight two years from now, with

MR. J. EDWARD ADDICKS.

SENATOR J. FRANK ALLEE (Rep.),
Of Delaware.

the advantage of having one of my close friends in the four-year term, and being myself national committeeman.

"Mr. Ball and his friends could not affect the situation for an instant; they can not carry the State. The fight in the State will be kept up unless they (the Regulars) coalesce. We will not be fooled again. This is the last dividend for the Regular Republicans. They haven't any popular vote left. Hereafter they will not have the advantage of federal appointments to help the Democrats. Ball

will be just a mere figurehead. He has been practically a Democrat the last two years."

Many papers believe that Mr. Addicks will realize his expectation two years hence. The Philadelphia *Inquirer* (Rep.), which has kept in close touch with the Delaware situation, says:

"The bolters have been fighting for years to clean out Addicks. They have failed to do so. He has not been elected to a seat in

the Senate in person, but there can be little doubt that with the advantage he has gained he will be by the Legislature of two years hence. His close friend and follower, Mr. Allee, was forced upon the bolting Republicans. They have been obliged to accept him, and to the so-called 'regulars' he is in every way as obnoxious as Addicks himself.

"From a strategical point the Unionists have won a great victory. Mr. Ball, whom the bolters have selected, will have but two years, and meanwhile the Unionists, with added power, will no doubt organize as never before in the expectation of turning his seat over to Mr. Addicks on the 4th of March, 1905. The Unionists are in the saddle at Washington for four years in any event."

Altho the Republican party gains two Senators by this elec-

THE GASMAN: "Understand, tho, I withdraw voluntarily."
—The Philadelphia North American.

tion, many Republican papers grieve that the anti-Addicks Republican members of the Delaware legislature united with the Addicks members as they did. It would have been better to unite with the Democrats in the election of one anti-Addicks Republican and one Democrat, according to the *New York Press* (Rep.) and the *Buffalo Express* (Rep.); and several other papers recall that the Democratic members had just announced their willingness to vote for two anti-Addicks Republicans, which would have obviated the necessity of voting for either a Democrat or an Addicks man. It is "impossible to congratulate Delaware greatly" on the result, thinks the *New York Sun* (Rep.), and the *Hartford Times* (Ind. Dem.) can see "no substantial gain for the cause of decent and honest government" in it. "The anti-Addickses," it declares, "might as well have capitulated to Addicks and his machine two years ago, as to have carried on their contest with so little practical result to themselves or to the ideas which they pretend to represent." The outcome is credited to Senator Hanna's influence and efforts by a number of well-informed papers, including the *Boston Transcript* (Rep.), which calls it "a victory that puts him on the defensive before the country."

Delaware is only one illustration of a tendency that is becoming apparent in our senatorial elections, thinks the *Springfield Republican* (Ind.). After remarking that Mr. Addicks "practically owns the State, and has made of it as rotten a pocket borough as can be found in the list of American commonwealths," it goes on to say:

"It is plain that a Rockefeller or Morgan or Carnegie could, if he chose, pick Delaware up and put it in his pocket, where it would rattle around like a silver quarter."

"And why may not this ownership of American commonwealths by individual millionaires extend? It has certainly gained considerable headway. We do not need to go to Nevada with its Stewarts and Joneses, or to Montana with its Clarks, or even to Rhode Island with its Aldrich and his lieutenant Brayton, to obtain examples of what seems to be a general tendency. The two largest States of the Union in point of population and wealth are to-day owned, for political purposes, if not by one rich man, then by several acting for themselves and general corporation interests, who prefer to exercise their power through agents like Platt and Quay rather than directly as members of the Senate. Michigan has become almost as thoroughly plutocratized as Pennsylvania. Ohio is making marked progress in that direction. New Jersey is already near the goal. Maryland can not be far behind. Massachusetts and other New England States, barring Rhode Island, and Iowa almost alone of Northern States manifest any very noteworthy ability to resist the influences which are commercializing the politics of the nation."

There are some exceptions, however, to all this unfavorable comment. The election "is the most satisfactory outcome that was possible in the existing situation," thinks the *Philadelphia Press* (Rep.), and the *New York Tribune* (Rep.) says:

"When the facts are duly considered the outcome does not appear unsatisfactory or unworthy of the men who have been professing to stand for a principle during the last eight years. In all that time Addicks has never withdrawn his original threat of 'Addicks or nobody.' According to the best evidence it was withdrawn over his head, to his astonishment and chagrin, by his lieutenants at their conference on Sunday. They are believed to have told him that they could not leave their votes at his absolute disposal any longer; that a combination between the regular Republicans and the Democrats which would completely control the situation was on the verge of being formed; that the vacancies must be filled; that they could not be filled by Republicans until he had been eliminated, and that it had consequently been resolved to eliminate him. That was a final repudiation of the 'Addicks or nobody' creed. It was essentially a surrender."

"If the regular Republicans should be accused of compromising with their opponents and their own convictions they could justly

answer that they had made no compromise, but had merely fulfilled a long-standing promise. They have repeatedly proposed in previous years to join with the Addicks men in electing one of their number, not Addicks, and a regular Republican, and they renewed their offer only a fortnight ago. They have considered, and seemed likely to form, a combination with the Democrats only because no alternative method of filling the vacant Senate seats, while excluding Addicks, appeared to be open to them. As the complicated situation stood for weeks, or as it was understood, Republican sentiment throughout the country would have abundantly justified their adoption of that course, and a great majority of honorable men of all parties would have rejoiced to see an utterly selfish and corrupt ambition defeated even at a sacrifice of party feeling. If, as now seems clear, the knowledge that such an arrangement was about to be consummated in obedience to a sense of duty led the followers of Addicks to override his authority and accept the offer which he had always contemptuously rejected, the moral victory is not impaired, while perhaps the political outlook is improved."

UNFINISHED BUSINESS IN THE SENATE.

FOR more than a year, the sentiment of the country, as expressed in the newspapers, has been in favor of concluding a treaty with Colombia for the construction of a canal at Panama, and has been overwhelmingly in favor of a treaty of reciprocity with Cuba. The United States Senate is still deliberating on these matters; and it is the hope of the President and of most of the press that it will in the present special session feel inclined to act favorably upon them. The appointments of Dr. Crum, colored, to be collector of the port of Charleston, and of William M. Byrne (Addicks Republican) to be federal district attorney of Delaware, are also still pending before the Senate for action.

The *Washington Star* understands that "there is a majority in the Senate in favor of both the canal treaty and the Cuban treaty," and, indeed, that the Cuban treaty "requires only a roll-call"; but nobody seems to think that either treaty will escape with any such easy treatment as that. Senator Morgan, of Alabama, who occupied the time of the Senate for several weeks during the recent session in talking against the Panama treaty, told a Washington correspondent last week that it will now be necessary for him to begin at the beginning and go over all the ground again for the benefit of the newly elected Senators who have not heard his arguments. But there is no time limit to this session, and many papers take comfort in the thought that the Senator must eventually bring his remarks to a close. Says the *Boston Transcript*:

"Even Morgan is mortal and almost eighty years of age. He can not exploit forever the extraordinary privileges which the custom of the body to which he belongs gives him. By compelling the close of the Fifty-seventh Congress with no action on the Panama treaty, he doubtless hoped that by sparring for time something might happen that would thwart the republic of the United States in one of the great endeavors of its history. The obstinate twelfth jurymen who stand out against the other eleven is not a circumstance for contumacy compared with the man who has been so viciously blocking the way of progress to seventy millions of people."

"We can hardly understand the temper of a man with Morgan's standing who so obstinately makes himself an obstruction and a nuisance, to the delay and detriment of such important interests as are involved in this question. We can understand it in an Addicks, who has been without reputation of any but the malodorous kind for a long time, and is only a vulgar adventurer anyway; but Morgan lays claim to statesmanship, and in some respects has shown statesmanlike qualities. Charity suggests that it is to be accounted for by senility that has taken the form of stubbornness. He is living in the past and can not understand why the country should have moved forward since the days when a different, tho as it now appears an inferior, scheme commanded its attention."

"The new pact between the United States and the French

company must be a severe disappointment to Senator Morgan. The conditions are now right for the new Senate to have it out with him. The bargain holds until the treaty is ratified or until there is a definite refusal on the part of the Senate to ratify it, a contingency which no one expects. So the fight which this octogenarian must now put up seems to be more against fate than ever before. What he is to gain, unless it is the gratification of personal spleen, we are unable to see. His career is almost over, and it is strange that he should try to end it by a losing fight against his Government and his country."

The Cuban treaty situation is complicated by the contention that action by the House will be necessary to make the treaty valid. As the measure will affect the tariff revenue, some claim that the House must pass upon it. In case the Senate shall ratify the treaty, and the Administration shall put it into force without waiting for action by the House, this interesting point may be settled by the courts. The editorials favoring the treaty are much the same as those which have been quoted many times in these columns. About the only journals that oppose it are those interested in the sugar industry. The *New Orleans Sugar Planters' Journal* says:

"The Brussels conference agreements between European sugar countries will go into effect next September, with benefit to Cuban sugar producers, and the prosperity of the island so assured that the treaty can not be ratified on the ground of being done in order to give Cuba necessary aid. In the mean time, work is quietly being done by representatives of European sugar-producing countries with the idea of showing that the ratification of the treaty will violate the favored-nation clause, and it is not unlikely that their protests against the adoption of the treaty may contribute much to its defeat. It is hard to understand why the Administration will insist on endeavoring to force through this treaty that is objectionable to the Cubans at large. It can do no great good and may do much harm. May it never pass."

A. C. LATIMER (Dem.),
New Senator from South Carolina.

LEE S. OVERMAN (Dem.),
New Senator from North Carolina.

WORK OF THE FIFTY-SEVENTH CONGRESS.

IN spite of protracted filibustering in both houses of Congress toward the end of the session and an amount of unfinished business that is, in the opinion of the *Philadelphia Telegraph* (Rep.), "probably unprecedented in the history of our national legislature," many papers declare that the work of the Fifty-seventh Congress was decidedly creditable. Its work "has been great and important, notwithstanding its failures," says the

Brooklyn Times (Rep.); and the *Buffalo News* (Ind.) thinks that this Congress is "one of the most notable in several years for the good work accomplished." President Roosevelt, just before the close of the session, sent a letter of congratulation to Speaker Henderson, in which he remarked that, "taken as a whole, no other Congress of recent years has to its credit a record of more substantial achievement for the public good." The Congress will be chiefly remembered, it is believed, for providing civil government in the Philippines, creating the new Department of Commerce and Labor, providing for the building of the Isthmian canal, giving Government irrigation to the arid lands of the West, and for its trust program, which includes the Elkins anti-rebate law, the act to expedite suits brought under the Sherman anti-trust law, and provision for two assistant attorneys-general. It broke the record for the amount of money appropriated, making it a little over \$1,500,000,000. A general staff was created for the army, and the law establishing a national militia was enacted. A permanent census bureau was provided for, the bar against Chinese immigration was maintained, and a new immigration act and a law aimed against oleomargarine were passed. The Spanish war-revenue taxes were repealed, the duty on anthracite was removed, and a new bankruptcy law was adopted. The gold standard was extended to the Philippines, a system of currency there was provided for,

EXTRA SESSION IDEAS ILLUSTRATED.

FAMINE IN FINLAND, NORWAY, SWEDEN, AND LAPLAND.

THOSE who decide what European news shall be cabled to this country seem to think it highly important that the American people be kept minutely informed of the daily movements and words of every foolish princess that furnishes food for gossip, and that the starving condition of some hundreds of thousands in the Scandinavian countries be treated, in comparison, as a small matter. The death of a few hundred or thousand peasants is dismissed with a paragraph, while a royal burst of tears or the stamp of a royal foot is good for at least a column. Some may be interested to know, however, that over 400,000 Finns, 200,000 Swedes, and many thousand Norwegians and Lapps are perishing of hunger. The situation seems to be worse in Finland than in the other afflicted countries. The St. Petersburg correspondent of the London *Times* reports that the Finnish peasants have been eating bark and unripe, frost-spoiled rye and barley made into bitter cakes that even the animals refuse to eat. So terrible is the dearth of vegetation, according to another account, that even the birds have died by thousands in the forests. An appeal from one of the famine provinces in Finland says:

"The rain prevented both the oats and the rye from producing sufficient for seed, and blight and frost made even this almost useless. Many have sought to make bread from the rye. It is scarcely possible to believe that it is bread. It is quite green, and hardly holds together, and is so bitter that one can not well swallow a morsel of it. Yet it is all many have to live on. And even this will not last many weeks. There are places where the people have not even such bread, but have to live on bread made from the bark of trees. With milk one might eat bark bread, but many have not this. They must kill their only cow. The failure of the hay harvest and the potato crop has been followed by an almost entire failure of the oats and rye.

"These who have the opportunity of traveling in these parts and of visiting one of the little homes, and of seeing the sad faces of the mothers, and the white faces of the almost naked children, and of hearing their cries for bread, and seeing how many cry in vain, realize how great and how pressing is the need."

The *Christian Herald* (New York), which is receiving and forwarding money to relieve the famine, has investigated the situation in Finland through correspondents there. It summarizes the conditions as follows:

"Last year's crops were a total failure, owing to the unprecedented rains, which rotted the grain in the ground. Besides, the fisheries, which supply the means of existence to a very large proportion of the people, also failed through the same cause. Peas, beans, and potatoes grew sodden and rotted in the soil, like the grain. The hay, too, then went through rot and flood. Spring was late; then came a long succession of chilly rains and early frost, killing off the last hopes of the farmers. In the provinces mentioned, there were not more than half a dozen dry days the whole summer. It was altogether the most utter crop failure in half a century, and has brought the people of one hundred and ninety-four parishes to a condition of destitution.

"Finland's average grain crop is easily \$12,000,000 short of the preceding year; and this, together with the loss in sea and lake fishing, means ruin to thousands of industrious peasant families. Hunger, with all its terrors, has invaded the northern provinces, and multitudes are to-day living upon bread made from unripe rye and barley, which even the horses reject. Loaves of barley husks and straw are all that stand between them and starvation, and there are thousands who have not even a morsel of that wretched compost to stay their hunger, and who are compelled to live upon the kindness of their neighbors. In the last great famine of 1867, when the crops failed, 100,000 were said to have died of starvation. This winter the situation is even more serious, and the authorities are alarmed for the fate of the sufferers. Four hundred thousand, or one-sixth of the entire population of the country, are reported as literally on the verge of starvation."

The Russian Government has spent \$3,500,000 or more in relieving the famine in Finland, European Russia, and Siberia, and expects to spend much more. The more fortunate of the provinces and cities in Finland have contributed \$500,000, and smaller sums have been sent in from this and other countries. Emigration is increasing rapidly.

LETTERS AND ART.

THE "CHIEF LITERARY MAN" OF AMERICA.

IN calling Mr. William Dean Howells "our chief literary man," Mr. Hamlin Garland probably means, tho he does not say so explicitly, chief of our living writers. He devotes twelve pages in the current *North American Review* to establishing this claim, and the gist of his argument lies in his title, "Sanity in Fiction," which sanity Mr. Howells is taken to represent as no other living American writer represents it.

Max Nordau has said, "The literature of fiction is an enormous collection of tales of disease," and he includes in this characterization naturalistic fiction. The reason for this Mr. Garland finds in the fondness of novel-readers for sensations, and the life which has by familiarity become commonplace to us does not furnish the desired sensations. "The near at hand remains squalid and prosaic." It requires a higher art to do what Whitman calls "teaching the average man the glory of his daily walk and trade." This higher art is Mr. Howells's, and he "more than any other of our writers" has shown that a public exists for a sane and wholesome novel. Says Mr. Garland:

"Mr. Howells's development has been steady and consistent. 'Their Wedding Journey' and 'A Chance Acquaintance' were hardly more than sketches of travel; but each succeeding book broadened in scope, till, in 'The Undiscovered Country,' he reached the full stature of a novelist. This beautiful story was easily the finest novel of New-England life of its time; but with the publication of 'A Modern Instance' Mr. Howells took his place among the wisest and best of the world's novelists. 'Silas Lapham' and 'Lemuel Barker' followed, dealing as no other novels had dealt with American social life, and Lowell's predictions concerning 'that young man Howells' were fulfilled. From that day to this he has remained a master spirit in our literature, and a study of his methods of appeal and the success he has had becomes of prime importance in considering the trend of our fiction. He stands for sound workmanship and for the permanent rather than for the ephemeral. He is a man of unswerving ideals, and remains unmoved by the rush along cheap and easy routes to success."

Mr. Howells's realism, moreover, is very far from being the naturalism of Zola. There is no kinship between them. Zola treated of the abnormally developed, the criminal, while Howells seeks his characters among the average and the usual. We quote again:

"In his war upon the romantic school, with their superhuman and ideal characters, Zola swept to the opposite pole. He proceeded upon the supposition that the public could not be interested in average personalities and in decent lives. As a result millions read his books for their brutal plainness of speech rather than for their tragic breadth and bitter comment."

"Not till Howells came did any considerable public in America appreciate the regular, the average, the near at hand. In a very high sense he is 'the evangel of the commonplace.'"

"It must be inserted at this point that many of our young novelists soon feel Zola's distrust, and fail in their attempt to depict in the realistic manner the life of some special locality, because of their fear of being dull. Whitman once complained

to me that the local novel (which I was advocating) was too sensational, too bizarre. The cowboy novel was to him a sort of delirium-tremens novel, because it flowed with liquor and was hazy with the smoke of gunpowder. He asked for a literature of the decent and decorous men of the West. He said in substance:

"Writers of this type comb together the unusual happenings of thirty years, in order to fill their books with odd or mysterious or picturesque characters. If they see in the paper a most singular account of a miser, or of a man living a double life, or of a man falling dead of heart-disease in a court-room, or of a horrible and mysterious murder, they clip it 'to work into' their novels. 'Are these not real facts?' they say. 'Do they not belong in a realistic study of an American town?' After being sufficiently spiced in this manner, stuffed with such sugar-plums, these novels are sent out as accurate studies of life in Pueblo or Omaha, when, as a matter of fact, they are as false to life as a city newspaper which ignores the law-abiding and quiet citizens, and deals only with the criminal, the abnormal."

"I was obliged to admit that there was much truth in his statement."

It is not true, Mr. Garland thinks, that a safe novel lacks readers. Mr. Howells is not neglected. He lives very well and his high position in literature is unquestioned. He admits that sensation pays better dividends, but an enduring literature, cannot be founded on it. "Suppose every writer in America were to turn next year to writing love romances of medieval France; what an absurd spectacle we would present to the world!"

A very important feature of Mr. Howells's art is his humorous and analytical study of women and the variety of his types of women. The lovelorn heroines of the Middle-Age literature, always young and ravishingly beautiful, all with "trembling white bosoms," and "tender limbs" and "silvery voices," no more represented the women of their day than a circle and three dots represent an individual face." Such wraiths could not exist for a moment on the deck of the

Aroostook, or in Silas Lapham's household. Mr. Garland observes further:

"This is of more importance than will at once appear, for the influence of fiction upon feminine character is very great. Girls get their knowledge of the world in large measure from novels, and it is of the utmost importance that their ideas of courtship should be sane and wholesome at least. The women in America read in far greater proportion than the women of other lands, and they read more fiction than the American man; and while their influence on fiction is admitted, fiction unquestionably has a corresponding effect upon them. The humorous exposition of feminine as well as male excesses and follies is likely to have a beneficent influence on the nation's life, by giving comparative ideas of life and love to 'the mothers of men.'"

"They certainly receive the most painstaking consideration from both Mr. Howells and Mr. James, many of whose books are most elaborate and serious studies of women, from the girl of nine to the grandmother of ninety, not confined, as were the old novelists, to those of a marriageable age and of extraordinary beauty. . . ."

"He does not rhapsodize over his heroines, it is true; he is not a passionate wooer of their favors; but he is always kind, always sweet and manly in his treatment of them. His humor is corrective; it is never bitter. He is interested in all silent heroisms. War and crime, the abnormal, the furious, are left out of his books. He is interested, not in what men and women

do in times of fire and murder and other exceptional circumstances, but in their quiet sacrifices, their every-day lives, in their calm moments. His love-stories are pure and sane and self-contained; the erotic maniac is not to be found in the very best of his volumes."

Mr. Garland admits that he can not always follow Mr. Howells, and that many of the latter's warm personal friends do not like his books. But this does not prove that his books lack art; it often means that the author is fresher in perception and sweeter in sympathies than his neighbors. The fault found with his alleged "useless particularities" is dismissed with the question, *are* they useless particularities, or do these details help to give individuality and vitality to the picture? In conclusion:

"When his volumes are finally bound together, they will present a study thus far unequalled by any delineator of American society. In such a final view it is possible that the apparent lack of large aim, which is now the most pertinent criticism of his stories, will have less cogency. When his plan is all under the eye, it may appear that the present is to be represented, not as the age of colossal personalities, but of high average personality."

DRAMATIZATIONS OF TOLSTOY'S "RESURRECTION."

PLAYS based upon Tolstoy's much-discussed novel, "Resurrection," have recently been produced in Paris, London and New York; and at least two more dramatizations of the same book are already announced in this country. The Paris version is the work of M. Henri Bataille, a young French disciple of Tolstoy. The version presented in England and the United States is Mr. Michael Morton's adaptation of the French play.

The plot is substantially the same in the three plays, and is summarized as follows by *The Theatre* (New York):

"The scene of the drama is laid in Russia at the present time. The central figure is Katusha, a girl of humble parentage, who,

at the time the play begins, has long been a favorite servant in the aristocratic household of Prince Nekhludov's aunts. The Prince returns home after a long absence, and becomes enamored of Katusha, who falls a ready victim to the libertine. The first tableau, which is really a prolog, closes with the scene of the seduction. The second tableau shows the jury-room in the law courts. Katusha (now known as Maslova, a notoriously immoral woman) is accused of poisoning a client in order to rob him. Maslova protests her innocence, and declares she was but the pas-

sive instrument of the real criminals. The jury has retired to deliberate, and this is said to be one of the most novel and striking scenes ever seen on the stage—the jurymen chattering and joking among themselves and giving only minor attention to the fate of the wretched prisoner. Among the jurymen is Prince Nekhludov, who has recognized in Maslova the unhappy girl he has ruined. The audience learns from his lips how

Katusha, driven from his aunt's house when she was about to become a mother, was reduced to the vilest prostitution until, finally, she faces the charge of crime. He knows she is innocent, and tries to convince his fellow jurymen. They shrug their shoulders, and agree upon a verdict of guilty. Nekhludov feels that he alone is the real culprit. His duty is to save her.

Next is seen the interior of the female prison at Moscow. Nekhludov has obtained permission to visit Maslova in prison. He finds her a moral and physical wreck amid a lot of wretched women who are quarreling and drinking. Maslova refuses to speak of what she has been—she wants to forget. Her memories are the cherished relics of an existence now gone. At first she does not recognize Nekhludov. When she remembers, she insults him; she detests him, and drives him from her. Then she faints in his arms, murmuring her undying love. In the next act Maslova has once more become Katusha. Her spiritual redemption has taken place gradually. She refuses the sacrifice Nekhludov would make, and the final tableau shows the halt in Siberia, where they bid each other an eternal farewell."

MISS BLANCHE WALSH,
Playing the part of "Maslova" in the New York
production of "Resurrection."

The Paris correspondent of the *New York Tribune* declares that M. Bataille has most successfully overcome the difficulties of the dramatization, and, while "avoiding the long nihilist disquisitions of the novel," has "condensed the essential theatrical elements of the story in a prolog and five acts, which are admirably mounted and acted at the Odéon Theater." He says further:

"It is indeed remarkable to see how thoroughly Parisians have become aroused and electrified with Tolstoy's idea, and with what earnestness they followed the tale from the love idyl of the prolog to the purification or 'resurrection' of the closing scene. The action moves swiftly and logically, and leading critics can detect no flaw in the dramatic workmanship of the play, which is regarded as by all odds the most successful drama produced at the Odéon for many a year. . . . The part of Maslova is acted to perfection by Mme. Berthe Bady, an actress who has suddenly taken rank among the foremost artists of Paris. Mme. Bady has a warm, sonorous, magnetic voice, and her rendering of the fallen woman is a most truthful and most human conception, acted with that force and absolute simplicity that form the secret of the art of an actress like Mme. Duse."

The London production of "Resurrection," in which Mr. Beer-bohm Tree and Miss Lena Ashwell take the leading parts, has not received so cordial a greeting. Mr. E. K. Chambers, of *The Academy and Literature*, while conceding that the play is "a triumph of adroit stage-generalship," finds it "wholly devoid of literary style." Mr. Arthur Symons, writing in *The Saturday Review*, declares:

"The play is a melodrama with one good scene, the scene in the prison; and this is good only to a certain point. There is another scene which is amusing, the scene of the jury, but the humor is little more than clowning, and the tragic note, which should strike through it, is only there in a parody of itself. Indeed the word parody is the only word which can be used about

production of "Resurrection."

the greater part of the play, and it seems to me a pity that the name of Tolstoy should be brought into such dangerous companionship with the vulgarities and sentimentalities of the London stage. I heard people around me confessing that they had not read the book. How terrible must have been the disillusion of those people, if they had ever expected anything of Tolstoy, and if they really believed that this demagog Prince, who stands in nice poses in the middle of drawing-rooms and of prison cells, talking nonsense with a convincing disbelief, was in any sense a mouthpiece for Tolstoy's poor simple little gospel. . . . Tolstoy has been hardly treated by some translators and by many critics; in his own country, if you mention his name, you are as likely as not to be met by a shrug and an 'Ah, monsieur, il divague un peu!' In his own country he has the censor always against him; some of his books he has never been able to print in full in Russian. But in the new play at His Majesty's Theatre we have, in what is boldly called Tolstoy's 'Resurrection,' something which is not Tolstoy at all. There is M. Bataille, who might take the responsibility of it, or there is Mr. Morton, who may have done more than merely translate M. Bataille, or there is Mr. Tree, who may have exercised the supervision of an actor-manager; but Tolstoy, might not the great name of Tolstoy be left well alone?"

The New York version was first presented on February 18—the same evening as the London play—with Miss Blanche Walsh as "Maslova." In the judgment of the *New York Times* critic, it "was interpreted by a company of actors of no great original power, who are unaccustomed to sincere realistic acting, and who for the lack of able and artistic stage management missed most of the literary and artistic values remaining in the text." The same writer continues:

"That in the stage version the outlines of this story should be sharpened and emphasized was inevitable. Even when reduced to a prolog and four acts it lasted last night until toward midnight. It was probably necessary to make Dimitri Nekhludhov really in love with his intended Princess and formally betrothed to her, even tho this with one fell blow alters Dimitri from Tolstoy's impersonal apostle of regeneration to the familiar type of stage hero, who delights in sacrificing everything in sight except duty. It may even have been necessary at the end to make Maslova, on the heights of her spiritual exaltation, send Dimitri back, as it were, into the waiting arms of his Princess, tho this was at once to detract somewhat from the grandeur of the moment as Tolstoy conceived it, and to make what last night (in spite of an evident intention to the contrary) was felt to be an unpopular and an unhappy ending. . . . Among all the hands that have passed on the play from Russia to New York, its literary value has been gravely impaired, without, it is to be feared, adding greatly to its popular appeal."

PRESIDENT HADLEY ON ACADEMIC FREEDOM.

NUMEROUS sensational differences have occurred of late years between the governing bodies and professors of some of our large institutions of learning as to the degree of freedom the latter should possess in teaching certain doctrines of political economy, theology, or science. Special interest attaches, therefore, to two articles written by President Hadley, of Yale, on "Academic Freedom in Theory and in Practice," and published in successive numbers (February, March) of *The Atlantic Monthly*. President Hadley, however, handles his rather warm subject in an academic rather than a journalistic manner, and approaches it from afar off. The liberty of teaching, he thinks, connects itself with other problems of civil liberty, and these can be properly analyzed only by historical study. Accordingly, he starts with the beginnings of history, and traces the progress of religious and civil liberty down through the ages, spending a little time over the differences between prophets and priests in Old-Testament times; rehearsing, in a manner distinctly unfavorable to Socrates, the charges against that ancient philosopher that resulted in his death; dwelling at con-

siderable length on the college songs of medieval days; and then, having conducted his readers through this long and interesting journey, he approaches and his readers approach the danger-signals that lie about the subject to-day in a very calm and philosophic frame of mind.

President Hadley emphasizes the distinction between liberty of thought and liberty of teaching. "Teaching is more than a theory; it is an act." It is not a subjective or individual affair, but a course of conduct which creates important social relations and social obligations. The expediency of teaching certain thoughts which any one should have liberty to think, can only

be decided by a careful examination of the circumstances of each particular case. It is on this ground that he maintains that the accusers of Socrates may, after all, have had a very good case. Judging from the careers of some of his pupils, Alcibiades and Critias, for example, the liberty of teaching which he exercised was creating dangerous conditions in Athenian society. The defense of Socrates was a "defense of freedom of thought rather than of freedom of teaching." In similar manner, the early Christians were persecuted by the

ARTHUR TWINING HADLEY,
President of Yale University.

Roman authorities not primarily for their religious views, for "different religions could exist side by side in the empire, and in Rome itself, without provoking so much as a suspicion of hostility"; but for "their habit of holding irresponsible assemblies, of which the Roman law was profoundly jealous, and of enunciating theories of sovereignty which seemed to conflict with that law itself." A further shock to many preconceived ideas is found in President Hadley's conclusions on the effect of the Reformation upon freedom of thought and of teaching. "The Reformation," he writes, "by the violence of the religious wars which it aroused, tended to obliterate the distinction between law and morals, and made not only Catholic and Protestant churches, but Catholic and Protestant sovereigns for the time being, intolerant of that liberty which a few centuries previous would have been taken as a matter of course." Again: "Neither the continental nor the English [university] system was in any wise favorable to freedom of teaching during the three centuries which followed the Reformation."

Coming down to the present-day question of faculty reorganization in American institutions, President Hadley divides the "somewhat incongruous functions" which our faculties exercise into three classes: (1) those for determining the nature and scope of examinations and the granting of degrees; (2) the nomination of teachers; (3) administrative and disciplinary measures. He writes:

"I can not see that, if we were once started on the road, there would be any great difficulty in separating the disciplinary function from the other two and putting it into different hands. Of course there is a convenience in the present practice; the man who is judging of the scholarship of any particular student has certain obvious advantages for supervising his conduct. But I believe that the disadvantages of the combination outweigh these

advantages—that the discipline hurts the teaching more than the teaching helps the discipline; and that no small part of the alleged infringements of student freedom could be avoided if these two matters were kept entirely separate.

"It will be remembered that perhaps before faculties existed at all, the students of Bologna were organized by *nations*—bodies of students and graduates charged with protection of scholastic rights and enforcement of good order. I can see no good reason against the attempt to reintroduce this arrangement in the United States. I should like to see the whole control of discipline, of athletics, of public student functions, and of intercollegiate relations of the undergraduates—in short, of all things outside of the sphere of study and examination—in the hands of a committee chosen either by the graduates alone, or, probably better, by students and graduates together. For the initial point in such an organization our alumni associations form admirable centers. Were the graduates thus given a regular organized place in the daily life of the universities, it would not only help to solve some of the problems of freedom of teaching by removing a disturbing element, but would tend to emphasize that community of interests and standards among college men which it is so important to preserve as a bulwark against some of the disintegrating tendencies of the day."

He would also have the functions of examination and teaching divided, tho this, he thinks, is a more difficult matter. "The teaching should be provided by the university rather than by the several faculties thereof." He says further:

"If this distinction could once be made, it would avoid most of the complaints of faculty interference on the part of the professors as completely as the graduate control of discipline would avoid similar complaints on the part of the students. The individual professor would see that if students were discouraged from coming to him by the arrangement of the course, it was because a certain faculty had its views as to the proper requirements for a certain degree rather than as to the proper teaching of a certain subject. He might differ from the members of that faculty in their opinion; but the difference would come in such a domain that it would not be an infringement of his liberty as a teacher, and would lose the element of personal bitterness which is now so prominent. The man who was unable to teach students in arts as well as he could teach students in philosophy would see the true reason for his non-employment in the former capacity far more clearly, if the arts faculty, as a *faculty*, were concerned solely with the requirements of the student and not with the qualifications of the professor."

The change from control of universities by rich donors to control by the state would not, he thinks, remedy matters much, as political control does not by any means mean educational freedom. The question is not so much one of the form of corporate control as of the general habit or standard of a community concerning toleration:

"A locality in which theological universities turn away professors for their views on points of doctrine is apt to be one where state universities turn them away for their views on matters of party politics. . . . The worship of the creed as a fetich and the worship of the platform as a fetich are both survivals of an earlier stage of civilization where the necessity of securing coherence of public sentiment was paramount to the necessity of securing free and progressive thought, or business-like execution of that thought. The more fully developed community tends to regard the creed not as an essential to salvation, but as a working hypothesis to secure an efficient basis of action—and it regards the platform in the same way. Under such circumstances, it is generally possible to secure enlightened administration, even of a pretty rigid deed of trust; and to secure proper regard for the future, even among those legislators and administrators who in politics are strong party men."

A "Poet's Trust" in Germany.—The lyrical poets of Germany, to the number of about seventy, have been considering the matter of remuneration, and have come to the conclusion that prevailing rates for German poetry are too low. They recently entered into a compact not to accept less than half a mark

(12 cents) a line for their work. This price, remarks the *New York Independent*, "seems no more than fair pay. It would be rather small here, but then German verse may well be cheaper." The *Baltimore Sun* comments:

"A great many new questions are raised by the organization in Berlin of a 'Lyrical Poets' Union' to restrict production and maintain prices. Competition has put down prices of poems in Berlin to such an extent that its seventy geniuses must combine to exact of their soulless employers a living wage. They demand a minimum wage of 12 cents a line, in order to be able to maintain the standard of living of self-respecting German poets. If capitalist publishers, lacking in humanity, ignore poets' rights, a strike will teach them a lesson, and the corners of the daily and weekly journals will be forced to content themselves with 'ads.' Where there are strikes there must be 'scabs,' boycotts, lockouts, picketing, etc. This opens a new prospect. Are lyrical scabs to be stabbed with shafts of wit and murderous epigrams? And will the union adopt the usual rule to limit the number of apprentices learning the business, so as to prevent excessive production? Many advantages must accrue from organizing the poetic trade on modern business principles and having a walking delegate. The trouble with the business heretofore has been want of regulation, the result being that the supply of product has exceeded demand."

The *London Academy and Literature* extends its sympathy not only to "the gentlemen whose lyric fervors were rewarded with less than sixpence a line," but also to "the editors whose hands are to be forced, if the forcing comes about." It adds: "To have seventy poets in a country each of whom writes verses worth sixpence a line must be a sore trial."

POE'S PLACE AS A CRITIC.

"POE is the most sublime poet since Milton"; but he "had not the breadth of view or the knowledge necessary for a great critic." So we are informed in an article in the *Chicago Dial* (February 16) by Mr. Charles Leonard Moore, a Philadelphia author. Mr. Moore's opening arguments supporting this conclusion are as follows:

"In the world's literature there are only two absolutely great critics—Aristotle and Lessing. The 'Poetics' of the one and the 'Laocoön' and 'Dramaturgie' of the other are the fountains at which all secondary critics must fill their pitchers. Aristotle is limited in certain directions by a lack of material to work upon; and, similarly, Lessing is circumscribed by dealing too exclusively with Latin and French authors. But they have the genius of divination, and their work is final. Amongst the ancients, Longinus was an inspired appreciator. He felt so fully the greatness and charm of literature that he communicates a like thrill and fervor to his readers. He is exalting and stimulating to the last degree. But except a few oracular utterances about style, and some dry remarks on grammatical forms, he gives us no information as to the underlying principles of art. English literature can boast of a long succession of critics only inferior to the great Greek and German—giant planets to that double sun. Dryden, Johnson, Coler-

AN ENGLISH "IMPRESSION" OF POE.
—From *The Protest*.

idge, Hazlitt, Arnold, Lowell—these and others have left us a body of criticism more varied and weighty than any other modern nation, save Germany, possesses. Does Poe deserve to rank with these men?

"Poe unquestionably performed one of the most difficult feats of criticism. With almost unerring instinct, he separated the wheat from the chaff of his contemporary literature. Hawthorne, Dickens, Tennyson, Mrs. Browning, and others received from him some of their earliest and most valuable appreciation. If he erred, it was on the side of enthusiasm. His position was analogous to that of an expert in precious stones, who can pick out by instinct the real and perfect gems from a mass of flawed stones or paste imitations. But such an expert is not necessarily a practised mineralogist or chemist, acquainted with the composition of minerals and capable of reproducing them in the laboratory. And the literature which Poe practised upon is certainly not of the first importance. His few casual utterances about really great books are wrong. His attempts to postulate principles of poetry are ludicrously wrong."

Mr. Moore proceeds to cite, as an instance of his author's "pseudo-poetic principles," Poe's brilliant essay on "The Rationale of Verse." It is vitiated, we are told, by "the assumption that verse is founded on quantity." "It would be a hard thing," says Mr. Moore, "to say that there is no quantity in English poetry—but it certainly does not perform the office that Poe imagined it did. I doubt whether any great English poet ever thought of quantity when writing his lines, or, save in exceptional cases, scanned them after they were written."

Poe was wont to assert that beauty is the sole province and object of poetry. "It is curious," observes Mr. Moore, "that his own work is lacking in just the quality he deemed all-important—beauty. Even in diction his phrase has seldom the perfect grace and haunting charm and massy weight which are almost habitual with Keats and Coleridge and Tennyson, and of which Wordsworth and Arnold and Emerson have such frequent use." We quote, in conclusion:

"Poe is the most sublime poet since Milton. Sublimity stirs even in his most grotesque and fanciful sketch—like Milton's lion 'pawing to get free his hinder parts.' It rears full-fronted in the concluding pages of 'The Narrative of A. Gordon Pym'—in the sentences which describe the enormous bulk and battle-lanterns of the ever-living ship in 'The MSS. Found in a Bottle.' It is predominant in the mighty sweep, the ordered disorder, of 'The Descent into the Maelstrom.' It thrills us in the many-colored chambers of 'The Masque of the Red Death.' It overwhelms us with horror in 'The Murders of the Rue Morgue.' It is solemn and awe-inspiring in 'Berenice,' 'Ligeia,' and 'The Fall of the House of Usher'—in 'Ulalume' and 'The Raven.' Metaphysic, which Poe derided—the great problems of life, death, and the universe, wherein sublimity most resides—haunted his mind continuously. He reaches his climax of almost too profound thought in the colloquy of 'Moras and Una,' 'The Power of Words,' and 'Eureka.' No poet has so continuously tried to outreach the possibilities of human experience; none has so assiduously avoided the ordinary facts of human life. His sublimity accounts for his fate with the American public. A true democracy, it abhors greatness and ridicules sublimity. Yet Poe fascinates it with antipathetic attraction. It follows him very much as Sancho Panza flounders after Don Quixote."

"In spite of its sublimity, Poe's theater of tragic abstractions is of course inferior to the flesh-and-blood theater of the great creators. They include him—they are as high as he, and they have many times his breadth and weight. But he is very great even in his one-sidedness—his silhouettedness. One-sidedness may indeed make an artist more intense and affective. But it is a crime in a critic. Despite his fine instinct for what was good, Poe had not the breadth of view or the knowledge necessary for a great critic. It is better that a critic should err in judgment in a concrete case than that he should lay down principles which are probably wrong."

KING VICTOR EMMANUEL has conferred on Signor Mascagni the title of Chevalier of the Order of Savoy. The conferring of the title is attributed to the King's desire to show sympathy with the composer as a result of his tribulations in the United States.

SCIENCE AND INVENTION.

ARE RAILWAY COLLISIONS ABSOLUTELY PREVENTABLE?

IN fifteen months not a single passenger has been killed on British railroads; in this country seventy-seven have perished in fifteen days. Why should this be? asks *The Scientific American*, editorially. Not because of the number of passengers, for British railways carry more passengers than ours; not on account of crowding, for the British traffic is handled on one-eighth as many miles of track as ours; not because their signaling systems are better, for many of the roads on which our accidents have happened have more perfect systems than the British roads. An eminent American engineer says that the difference is one of national temperament. "Here," he says, "we take chances." *The Scientific American* accepts this explanation and goes on to say that the remedy must evidently lie in automatic devices that will not allow the engineer to "take chances." Such devices there are, it says, that will make collisions practically impossible, and our appalling railroad accidents are therefore absolutely preventable, the only obstacle to putting them in operation being one of expense. In this connection the writer asks the question which he places at the head of his editorial—a quotation from Matthew's Gospel: "How much, then, is a man better than a sheep?" Here is *The Scientific American's* method of preventing collisions:

"Let us place two levers on the engine and two corresponding trips on the track, one within sighting distance of the green and the other within sighting distance of the red signal. Let the green trip register with a lever that shuts an auxiliary throttle-valve near the smokebox; let the red trip register with another that will set the emergency-brake. Then should the engineer fail to shut off steam and let his engine coast on approaching the distant green signal, it will be shut off for him; and if he fail to set the brakes on sighting the home or red signal, the trip will open the train-pipe. The levers could be so arranged that if the engineer manipulated his throttle and brakes in accordance with the signals, there would be no connection made between the trips and the engine. The suggestion as to automatic air-brake connections with the red signal was made several years ago, and it is excellent; the green light trip acting on the throttle is a logical extension of the idea."

"But," says the railroad official, 'by the use of an absolutely automatic system, you would destroy that element of watchfulness which it is our desire to cultivate in our engineers. They would become careless and would cease to watch for the signals. Then, should the signals fail, the chances of accident would be greater than before.' Very good; then let the roundhouse foreman set a seal upon the automatic levers on the locomotive before it starts on its trip; and let it be a cast-iron law of the railroad that if an engineer come back with the green signal seal broken, he will be fined thirty days' pay, and that if the red seal be broken he will lose his job, and be blacklisted from Maine to Florida and from New York to the Pacific coast."

"Here is a system that would prove an almost absolute preventive of collision, and that, incidentally, would produce in the first brief month of its operation a set of engineers who for alert vigilance would be hard to match."

To extend this method to all the block-systems would be enormously costly, but the writer suggests that it will be still more costly to keep on killing seventy-seven passengers in fifteen days; especially if, as recent jury verdicts are suggesting, the value of a human life is being estimated at a higher rate than it used to be. A man, he says, used to be worth about 1,000 times as much as a sheep; but the ratio is getting to be greater. He goes on:

"Furthermore, we must remember that, to-day, of our 200,000 miles of tracks, only 25,000 miles, or one-eighth, is equipped with a block-signal system of any kind. And here we find another potent cause of our perpetually recurring railroad horrors. Train

despatching by telegraphic orders assists in keeping up the frightfully high average of railroad disasters. Take note of Accident Bulletin No. 5 just issued by the Interstate Commerce Commission, which records that in the three months ending September 30, 1902, 263 persons were killed and 2,613 injured in railroad disasters. At that rate, in the fifteen months of which we have spoken, the total number of killed would run up to 1,315 and the injured to over 13,000.

"And to think that it is all preventable! Moreover, just as soon as we really understand how infinitely much a man is worth more than a sheep, it *will* be prevented—if not by the initiative of the railroads, then by legislative act compelling the application of a direct, engine-controlled, block-signal system to every one of the 200,000 miles of track."

THEORY AND FACT.

THAT a theory accords with the facts does not necessarily prove it true, altho, until some discordant fact is observed, it may serve a useful purpose. Some such theories have thus served for scores of years, only to be cast aside at last. According to Poincaré, the eminent French mathematician, an infinite number of theories, only one of which is actually true, may be devised to account for any given state of facts. Says an editorial writer in *Engineering* (London, February 13), discussing this statement:

"Poincaré has stated that, given any series of phenomena, an infinite number of mechanisms can be devised, the working of which will give rise to the phenomena actually observed. To each of these mechanisms will correspond a different theory, of which, even in the most favorable case, only one can really represent things as they are. Such a representation is, however, he remarks, not the principal aim of a theory, the main object of which is rather to facilitate prediction; and in the case cited, any one of the wrong theories above referred to would do this as well as the single correct one, so long as no new phenomena were introduced into the series to be coordinated. In the practical work of the world an imperfect theory is much better than none at all. No known gas accurately observes Boyle's law [that volume is inversely proportional to pressure], but the utility of the concept is but little affected thereby. And to take a more modern instance, there are considerable difficulties still unexplained in the theory of the ionization of electrolytes due to Arrhenius. On this theory the mere solution of most mineral salts in water splits up the molecules of the salt into ions, which may either be atoms or atomic groups. This splitting up is, however, accompanied by no absorption of heat, tho much heat may have been liberated in the original formation of the molecule. It is true that each ion bears an enormous electric charge, but the charges, being of opposite sign, should tend to keep the ions constituting the molecule together, whereas they appear free. Nevertheless, and in spite of these difficulties, the theory has led to remarkable predictions, which experiment has confirmed, and has greatly facilitated the grouping together of a number of phenomena which at first sight seem in no way closely allied. That it has attained its final form, however, is unlikely, and it may well be profoundly modified in the future. Indeed, as time goes, almost all old theories are superseded by new ones, but their skeletons are often incorporated into the ultimate constitution of the science, as that of a coral is into the substance of the reef on which it grew. The very terms which originated in the days of more imperfect knowledge are often retained and used in much the same way as when first introduced. The expression 'latent heat' is itself a legacy from the days when heat was considered a substance; and as commonly used, no one ever stops to remember that the heat which has disappeared is no longer heat, latent or otherwise, but is represented by an equivalent quantity of internal and external work.

"The object of a theory being to facilitate prediction, it is natural to adopt that which most readily lends itself to arithmetical and algebraical calculations. Mathematicians tell us that the positions of the heavenly bodies could be predicted with equal accuracy on the Ptolemaic hypothesis of a geocentric universe as on that of the modified Copernican theory, which has replaced it, only the arithmetical work would be much more tedious and

involved. Nevertheless, from the mathematical point of view, there is no reason for assuming the one hypothesis to be more correct than the other. The Ptolemaic cycles and epicycles used to predict the future positions of the planets are merely analogous to Fourier's trigonometric series; and it thus follows that by taking a sufficient number of terms astronomical calculations could on this system be made to any degree of accuracy desired. We are reminded here that amongst the hypotheses put forward to account for the erratic behavior of Uranus prior to the discovery of Neptune was the suggestion that at such an enormous distance from the sun Newton's laws were no longer exact. The brilliant rehabilitation of these laws subsequently is a hopeful augury for the ultimate result of the careful investigation now being made into the doctrine of conservation of mass with which we have dealt above."

FARM MACHINES THAT SEEM TO THINK.

HUMAN control is reduced to a minimum in some of the latest examples of improved farm machinery. The machine performs its various operations automatically, almost as if it had a mind of its own. All the operator has to do is to feed it and steer it. Says *The American Exporter*, describing some of these ingenious devices:

"For planting, there is a machine for every kind of seed, cunningly designed, well built, and perfectly adapted to the work for which it is intended. It makes no mistakes, never skips an inch, sows no more thickly in one place than in another, and does its work with an intelligence which the average farm-hand could not be expected to display.

"For grain and grass the 'broadcast-seeder' is used. This is attached to an ordinary wagon, and the only human cooperation it requires is keeping its hopper full. It will also distribute all kinds of dry commercial fertilizers, and put them just where they will do the most good.

"A mechanical grain-drill is provided for such grains as need to be planted systematically in rows or hills. It is infallible in its operation, and would plant corn, for example, in the middle of a macadam road, if this was required of it. Among other attachments it has a land measurer, something like a cyclometer, which records the acreage planted. To cover the seed it has planted, it is provided with a system of hoes which are adjusted to work straight or zigzag.

"A variant of this apparatus weeds as well as sows. Still another is the bean-planter, which is quite remarkable in its intelligence, so to speak. It drills the hole in the ground, plants the beans, covers them, and marks the position of the next row at one operation. It will even alternate corn with beans, turn and turn about, or plant corn or beans, distribute fertilizer, and cover everything impartially. In fact, it will do anything for which the farmer has the intelligence to adjust it.

"The potato-planter would make a farmer of a generation ago sit up and rub his eyes. It requires that the potatoes be supplied, but will do all the rest of its own initiative. It picks the potato up and looks it over—or seems to—cuts it into halves, quarters, or any desired number of parts, separates the eyes, and removes the seed ends. It plants whole potatoes or parts thereof as desired, as near together or as far apart as the judgment of the farmer on the driving-seat suggests. Having dropped the seed it covers it, fertilizes it, tucks it in like a child put to bed, and paces off the next row with mathematical accuracy.

"Certain vegetables, notably tomatoes, cabbages, cauliflower, celery, lettuce, and some others, need to be started in cold frames, and transplanted for the practical business of growing. For this purpose there is a plant-setting machine, which will handle a sprout as if it loved it, establish it in its new environment, gather the earth tenderly about its roots, give it a copious drink of water from a tank it carries, and cover from four to six acres in a day.

"The various operations generically known as 'cultivating' were once the bane of the farmer's existence. Now he has a machine for each and every operation of crop tending, with a driver's seat as comfortable as that of a buckboard. These machines seem to know a weed from a crop plant intuitively, and while they will snatch the former out by the roots without compunction, they pass the plant unharmed—provided, of course, it is growing in its proper place. These machines have been

highly specialized, and for every operation connected with the tending of every kind of crop, there is some one machine which performs it a little better than any other.

"When the crop is ready for gathering, mechanism is seen at its best. The perfection of the modern reaper and binder is illustrated by an incident which is said to have occurred this year in Illinois. A farmer had driven his reaper into the edge of a field ready for cutting, and dismounted from his seat to get a drink of cider. While thus occupied the horses took fright and ran away. They tore round and round the field, cutting a full swath with every jump, gathering up the grain, binding it with twine, and tossing the bundles to one side. Before the team was caught it had covered six and a half acres, leaving only patches here and there to be gone over. This was accomplished in something less than twenty-four minutes."

SAWDUST AS AN ALIMENT.

THE comic paragrapher is accustomed to liken various kinds of breakfast-foods to shavings or door-mats, and to compare the lot of him who eats them with that of the horse condemned to feed on dry hay. Articles on food-adulteration, which are not intended to be funny and certainly are not so to the consumer of cereals, give grounds for the belief that in some cases the likeness is more than an apparent one. A recent account of "Some Falsifications" contributed to *Cosmos* (Paris, February 14) by Paul Combes, informs us that ordinary sawdust has for several years been a favorite ingredient of certain cheap flours and cereal foods, and he gives a recipe for detecting it. Says M. Combes:

"Very fine sawdust is sometimes mixed with cereal foods, and has at least one advantage—it is not a poison. It even constitutes a sufficient food for the larvæ of certain insects, but it is quite insufficient for the nourishment of man. It was shown several years ago (1898) that certain suspected cereals contained no less than forty per cent. of wood-sawdust.

"This adulteration is found especially in wheat flours of inferior quality and also in oat or rye flours, which normally contain cellulose débris coming from the grain itself. Thus it is somewhat difficult to detect.

"Nevertheless M. Le Roy has attempted to apply to the test the color reactions produced in cellulose by different substances, such as orcin and amidol—well-known reactions, but not hitherto used in this special manner.

"He has obtained excellent results by using a reagent that shows in a few seconds the presence of wood-sawdust in meal. This has the following composition:

Ethyl or methyl alcohol of commerce.....	150 cubic centimeters.
Distilled water.....	150 "
Sirupy phosphoric acid.....	100 "
Phloroglucin.....	10 grams.

"It suffices to throw a pinch of the suspected cereal in some of the liquid and to heat it gently. If the flour contains wood, the particles of sawdust will assume a brilliant carmine color—the coloration produced on the cellulose particles coming from the grain itself is absent or slight, at least for some time; as for the starch particles, they remain colorless. The observation may be made with the naked eye or with a strong lens.

"A solution of phloroglucin in hydrochloric acid acts too energetically under the same conditions; the difference of color between the particles of wood-cellulose and grain-cellulose is less marked.

"Of course M. Le Roy's rapid and sure reagent does not enable us to measure the proportion of sawdust in the flour, but it reveals the adulteration, which can afterward be studied more carefully with the microscope."—*Translation made for THE LITERARY DIGEST.*

Reported Discovery in Shipbuilding.—What is stated to be "an impending revolution in shipbuilding" is announced from Germany in a special message to *The Times* (New York). The correspondent tells us that Professor Kretschmar, of the imperial navy, has a radically new plan for the construction of ves-

sels, by which the traditional shape of the hull is entirely altered. He says of this invention:

"It completely rejects the traditional type of ship patterned on the form of fishes and substitutes that of aquatic birds by giving vessels the outlines of a tetrahedron—that is, a figure inclosed by triangles. By minimizing the wave resistance the new form augments the propelling capacity of the screws of a ship of the present type 50 per cent., thus producing a corresponding acceleration of speed without any increase of power. Kretschmar's theory rests on the proposition that a vessel should be built in the shape of an animal which moves on the surface of the water like a boat instead of in the shape of a fish, which moves through the water. His type does not produce bow, stern, nor side waves nor commotion of any kind in sliding or gliding through the sea."

Commenting on this, *The American Machinist* says:

"We are not quite certain about German ducks, geese, and swans swimming in German waters, but any one who has observed them here in America knows that the 'bow-wave' is a prominent feature of their progress over the water, and we must say that the report seems to promise entirely too much. We do not believe that a boat has been, and we doubt very much if one ever will be, made that can go through the water at any considerable speed without producing 'commotion of any kind' in the water."

JAPANESE DWARF TREES.

THE method by which the Japanese succeed in growing dwarf trees that seem miniature copies of the large natural forms was long a mystery. It is now known that this is done by a skilful and long-continued course of pruning and regulation of nutrition. In a pamphlet on the subject, M. Albert Maumené tells us that this method ought not to be called unnatural and artificial, since it is but an extension and systemization of what nature herself does to the vegetation on high mountains, bleak shores, and other barren spots. The *Revue Scientifique*, speaking of M. Maumené's brochure, says:

"It is well known that the art of dwarfing the largest trees is part of the education of the Japanese upper classes; that it has its schools and its celebrities. Young persons of fortune devote to it the time that our young women give to the piano, which shows a comprehension of the things of the artistic life quite different from ours.

"For the Japanese, in fact, the garden is the outside parlor; the parlor, the inside garden. They always wish to produce the illusion of a natural landscape, with the same prodigality that nature uses to adorn rural spots, and as they join a rare imitative talent with a fine observing mind, they have become a nation of artists in this particular.

"So the skill of their gardeners consist not in making beautiful flowers simply grow and flourish. Their ambition is greater: trees grown in pots should recall by their appearance those that grow on the mountain sides, on the edges of ravines; and while remaining small, their majestic forms and original outlines must be preserved. The cultivation of these trees is a work both of time and of patience. This dwarfing, or, to speak more exactly, this atrophy of plants is the result of physiological causes which are themselves the consequence either of the processes of culture employed or of the environment of the plants. We must take account of these two influences at once in the formation of the liliputian trees of Japan, for the Japanese climate plays a preponderant part in predisposing vegetation to remain dwarfed.

"Great altitude, dry heat, persistent cold, insufficiency of nourishment, cramping of the roots, lack of food in the youth of the plants, winds that bend or break the stem—these are some of the elements that determine the arrest of development of the plants that every one has observed in excursions to the mountains, among the rocks of the coast, and in arid places in general. 'A conifer whose top is cut off,' remarks M. Vallot, 'is arrested for a time; if this operation is performed anew every time the tree begins to recover, the time of arrest will become longer and longer, and the tree will remain knotty, deformed, and dwarfed.'

"All the cultural operations, whether on the subject or on its

nourishment—such as continued trimming, twisting, and turning of the branches, transplanting to small pots, cutting away roots, etc.—that can paralyze the vital functions, obstruct the circulation of the sap, or lessen nutrition, will provoke a stoppage of growth, showing their effects in a very noticeable reduction in height and sometimes in deformation of the plant, and thus prepare it for dwarfing. This would be merely a matter of time and perseverance, if the Japanese did not also use esthetic feeling and a certain art in the making of their pygmy trees. The same subjects, tho less dwarfed in their branches, may be met at each step on mountain sides, in the fissures of rocks, and in all situations where plants struggle for existence against the elements. The processes employed by the Japanese are thus not so unnatural as some have affirmed.

"The conifers are the plants that are chosen preferably for the formation of these pygmies; besides these, the oak, the plum, the bamboo, and the cherry are species that take kindly to dwarfing.

"In 1878 was seen for the first time in France a collection of Japanese trees; in 1889 another collection was shown, but in 1900 only a few examples were seen in the Japanese garden at the Trocadéro. A cedar, aged 250 years, according to the catalog of the Paris Horticultural Exhibition, was sold for 1,300 francs [\$260].

"The English seem to be very fond of these trees, which are not yet in the fashion with us. They are considered unfit for use indoors, and are generally for the open air, to be placed in a partially shaded spot, as in a garden or on a terrace."—*Translation made for THE LITERARY DIGEST.*

ARE THE SWISS GLACIERS DISAPPEARING?

A GOOD deal has been written in Europe lately, and especially in France, about "white coal" as a source of energy. By this figurative phrase is denoted the glacier ice of the high mountains, which, melting gradually, gives rise to streams that never fail. These mountain torrents are being more and more used for generating power, and thus glaciers may be looked upon as mines of stored-up energy. The idea has been that, while the exhaustion of the coal supply is only a matter of time, here are mines of "white coal" that are inexhaustible because continually renewed. But now comes M. P. Delahaye, who, in a communication to the *Revue Industrielle* (Paris), points out that we have evidence that the Alpine and other glaciers are shrinking, so that the white coal may not be any more reliable in the end than the black. Says this writer:

"Until recently, no one concerned himself much about the life of glaciers; geologists knew perfectly well that they were not immovable and that there were variations in their mass and form; but isolated observations did not enable us to formulate general conclusions regarding the glacial system of any particular region. It was necessary for this purpose to subject a certain number of glaciers to systematic observation, after surveying the region exactly, and to assure ourselves by annual verification whether there was advance or recession, augmentation of the mass or diminution. In 1874 the Alpine Club of Switzerland made a chart of the Rhone glacier; in 1881 a Swiss naturalist, M. Forel, published an essay on the periodic variations of glaciers; later the German and Austrian Alpine Clubs began to map the glaciers of their countries, and for some little time the Tourists' Society of Dauphiny has been watching constantly the glaciers of the French Alpine region. M. Kilian, professor in Grenoble University, has devoted himself to this study, and the observations that he has been making personally for the last ten years show us that a number of the glaciers of Dauphiny are disappearing with unsuspected rapidity.

"M. H. de Varigny has recently discussed the data furnished not only by M. Kilian in his observations on the variations of glaciers, but by Messrs. Forel, Finsterwander, and Murat, and Messrs. Richter and Porro, in the reports devoted to Switzerland and the Eastern and Italian Alps. The phenomenon of decrease is manifested everywhere, if we credit the proofs collected in

Sweden, the Caucasus, Kilimanjaro, the Altai, the Himalayas, etc., and reproduced by the *Revue de Glaciologie*.

"Because of the small number of years during which the scientific study of the subject has been carried on, it would be premature to say that the present glaciers are destined to disappear from our land, altho some of them are diminishing almost to the naked eye. It is possible that they are passing through a crisis due to the persistence of winters with little snow or of warm summers. But still the constancy of the glacier is a hypothesis that is not confirmed by known facts; and when we speak of the utilization of the energy of 'white coal,' when it is predicted that this will be substituted sooner or later for black coal, we ought not to forget that when the time comes when we have no more coal, it may be that we shall be also lacking in part of the natural resources on which we are now relying to replace it."—*Translation made for THE LITERARY DIGEST.*

TELEGRAPHY BY ELECTRICAL SENSATION.

A COMPLETE telegraph in which the messages are read by slight electrical shocks communicated to the finger-tips has been devised by a Pennsylvanian, who claims that it will find a wide use among deaf-mutes and perhaps among others. A correspondent of *The Western Electrician*, who describes the method, says that by it "deaf-mutes and blind mutes are enabled to dispense with the finger-and-lip service, as well as the raised-letter method, and converse freely, as well in the dark as in the light." He goes on to say:

"The invention consists in establishing communication by electric impulses through a circuit in which a source of electricity and a person or persons receiving the impulses form a part, with apparatus under the control of such person or persons for making the impulses with rapidity and facility.

"The accompanying drawing is a plan view of an ordinary battery having electrical conductors provided in accordance with the invention. Referring to the drawing, (a) indicates a binding-post for attaching the positive wire, and (b) a post for attaching the negative wire. Bifurcated wire conductors (c) and (c') are attached at their upper ends to the posts (a) and (b). To the free end of these conductors and their bifurcated points are attached metallic finger thimbles which form contact-members.

"The key of the battery is indicated by (n). Now, when one person incases the thumb in (d) and the forefinger in (d') of one set of conductors, and another person incases the thumb in (e)

TRANSMITTING INTELLIGENCE BY ELECTRICAL SENSATION.

and the forefinger in (*e'*) of the other set, and the key end is closed, each of the thimbles becomes electrified and both persons are impulsed; but when the thimbles (*e*) and (*e'*) are touched the current is short-circuited and neither party feels the impulse, and if (*e*) and (*e'*) are left open and thimbles (*d*) and (*d'*) are made to touch, the current is short-circuited, and there is no impulse to either party. Thus the impulses may be sent from one to the other with instant rapidity by means of touching and opening the thumb and forefinger thimbles.

"Now, by using the Morse code," says Mr. Reese, "two persons within this circuit can converse together as rapidly, as distinctly, and as accurately as a person can now telegraph a message. There need be no mistakes, as both persons feel the same impulses. The strength of the impulses may be made lighter or stronger by adjusting the regulator (*o*). When the current is not required, it should be shut off by opening the key (*n*).

"By the use of my improved method persons may carry pocket batteries and converse with each other while walking on the street or while on the cars or other mode of transit. They can talk in the dark as well as in the light, and where the house is properly wired persons in different rooms or in different beds may commune together. The blind-mutes can throw their cumbersome fingerboards away and receive and send their impulses by electricity with as great rapidity as can be done by telegraphing to-day. The schoolhouses can be wired, so that the teacher can speak to any one or to every scholar in the class-room at the same time and can call any one or class to the office at any time. The great advantage of the bifurcated wires is that they bring both parties in when the circuit is open and throw them both out when either side is shunted. When two parties hold the thimbles, a third party may send a message to them by using key (*n*); but he could only receive the answer through the thimbles. The thimbles are such as ordinarily used by women in sewing. They have an opening in the end, so as to receive the wire, which may be easily separated, so as to attach a thimble of the desired size."

"WHAT IS ELECTRICITY" AGAIN.

ACCORDING to the theory advanced by Prof. J. J. Thomson, which has gained so many adherents, and has so deeply modified scientific thought in the past few years, atoms may be further subdivided into "chips," each of which constitutes a negative charge of electricity. An interesting modification of this theory by Sir Oliver Lodge is noted in *The Electrical World and Engineer* (February 21). According to Sir Oliver's theory, all matter is electric in nature. Says the writer:

"In the paper under consideration, the electronic charge carried by the corpuscle is regarded as the corpuscle itself. That is to say, instead of assuming a nucleus or core of matter to carry the electronic charge, the charge . . . is regarded as the corpuscle. All matter is assumed to be built up of these electronic charges or electrons, which are both negative and positive. A hydrogen atom is supposed to contain about 700 of these electrons. A mercury atom is reckoned to have 200 x 700 or 140,000 electrons all stowed away inside. . . . One might suppose that they are tightly packed. But, on the contrary, since the diameter of the electron, to account for its inertia, has to be 10.15 meters, or the millionth of a micron, there is so much elbow-room for the 140,000 supposed inhabitants of the mercury atom that they are roughly as distant from each other, relatively to their size, as are the planets in our solar system. . . .

"The electrons perform orbits inside these little spheres, but the place which our sun occupies in our visible planetary system seems to be vacant in these atomic systems. According to the hypothesis, the electrons do not swing about a grand central electron, but about one another. The difference between one kind of matter and another lies in the physical and chemical properties of the atoms; but the difference between the atoms is merely due to the difference in groupings of electrons. . . .

"All chemical affinity is traced to aggregations of electrons, or atoms, with odd or unbalanced electrons either positive or negative. Chemical union is the result of the attraction of such unsatisfied electric charges on different atoms for one another. Cohesion is a less locally powerful, but more extended, electric attraction of groups of electrons in mutual linkage or satisfaction.

Cohesion, in the electric sense, as in wireless telegraphy, is the artificially enhanced molecular attraction due to electric stimulus and the momentary inductive displacement of groups of electrons. . . .

"The Lodge theory of the electron appears to differ then from the Thomson theory mainly in postulating that there is no matter in an electron or corpuscle, and that this little fundamental unit is all electric. Thomson's theory means that negative electricity is matter. Lodge's theory means that all matter down to the ultimate corpuscle is electricity. The difference in thought between the two theories is quite appreciable; but there is so little matter in an electron that it matters little to which we pin our faith."

It will be noted that in both these theories it is the relationship between matter and electricity that is explained. Thus they answer the question "What is matter?" quite as truly as "What is electricity?" Tho in a sense they answer neither, they certainly form a basis on which we can acquire a vast amount of additional knowledge about both.

White Light for Photographic Work.—To many amateur photographers the dim red light used in the ordinary dark room is very disagreeable. All such will be glad to know that it is possible to use a liquid filter that will strain out the sensitive rays of light without altering its color, so that developing and fixing may be done in white light. This fact, according to *Cosmos* (February 7) was discovered by a French photographer, M. Liesang, and has been known for several years. Says that paper:

"A solution of three parts of nickel chlorid (green) and one part of cobalt chlorid (red) is colorless by transmitted light and at a certain dilution becomes clear like water. As the light that traverses each liquid separately is inactinic it must also be so after having passed through their mixture, and thus can have no action on silver salts. To absorb the ultra-violet, the vessel containing the solution is covered with collodion mixed with sulfate of quinin, feebly acidulated with sulfuric acid. Sensitive paper exposed for a week to this light undergoes no alteration."—*Translation made for THE LITERARY DIGEST.*

Rapid Growth of Fish.—Experiments recently made in England furnish interesting information regarding the rapidity of growth of fish of the salmon family during their stay in the sea. Says a writer in the *Revue Scientifique* (February 14):

"A sea-trout weighing 3 pounds when captured and marked July 8, 1901, weighed 6 pounds when retaken in July, 1902, having thus doubled in weight in one year. A 13-pound salmon taken and marked in January, 1901, weighed 21 pounds in July, 1902, and another salmon weighing 16 pounds in August, 1901, reached the weight of 22 pounds when retaken in July, 1902. An example of still more extraordinary growth has been reported. A male salmon caught at Castle Connell on February 24 of last year, by Mr. S. C. Vansittart, weighed 19 pounds. It was marked by one of the tags used by the Department of Agriculture, bearing the number 1,502, and replaced in the water. On March 26 following the same fish was retaken at O'Brien's Bridge, five miles from Castle Connell, and it then weighed 33 pounds. Its weight had increased by 14 pounds in one month and two days. The fact may seem incredible, but it is indubitable, having been established by a naval certificate."—*Translation made for THE LITERARY DIGEST.*

COUNT ZEPPELIN, according to the Geneva correspondent of *The Daily Mail*, London, has just completed an automobile-launch "which possesses the peculiarity of having its propellers in the air. According to the inventor, the launch will be of the greatest use in tropical lakes and rivers encumbered with aquatic plants, which, obstructing the screw, render an ordinary steam-launch useless. The launch is extremely light, has a draft of only ten inches, and it skims the water at a rate varying from fourteen to sixteen miles an hour."

THE RELIGIOUS WORLD.

CAN PALESTINE AGAIN BECOME A FERTILE LAND?

IN view of the contradictory reports concerning the Jewish agricultural colonies established by the Rothschilds and Montefioris in Palestine, and of the program of the Zionists to reestablish Jewish nationality in the land of their fathers, it is of interest to hear what specialists say as to the possibility of making Palestine again a land flowing with milk and honey, changing it from a country that now barely supports 600,000 to one that will sustain between 2,000,000 or 3,000,000, as in the days of Joshua, or between 5,000,000 and 6,000,000, as in the times of King David. A most valuable contribution on this subject, entitled "Die Niederschlagsverhältnisse Palästinas in alter und neuer Zeit," by Dr. Heinrich Hilderscheide, fills two entire numbers (Nos. 1 and 2) of the *Zeitschrift des Deutschen Palästina-Vereins* (Leipsic). It gives a wealth of statistical data on the meteorology and climatology of the Holy Land, and then, on the basis of these data, the writer has this to say:

"The question whether Palestine can not again be made as productive a country as it was two thousand years ago can only be answered if the causes are examined that have led to its present degenerated condition. If these lie in permanent changes in the climate, in a decreased average of annual rains, and other factors not under the control of mankind, then it is useless to hope that money or energy will restore the pristine productivity of the land. If, on the other hand, the causes lie in historical and political changes, chief among which is the mismanagement of the country by the Turkish authorities, then there can be no reasons why such a restoration should not take place. Both of these views have had ardent champions among the specialists, among the advocates of the former view being Hull, Franz, Fischer, and Zumoffen, while Condor, Lartet, Ankel, and others are equally decided in their defense of the second opinion.

"A candid examination of the facts in the case shows that they are decidedly in favor of this latter position. The former view is really based upon a *petitio principii*. It is presupposed that there have been radical changes in the climate of Palestine in historic time, and that these changes have been produced by the ruthless destruction of the forests. Now the fact in the case is that we have no proofs whatever that the forests of Palestine were in the Biblical times any more extensive than they are now. We have no evidence from any author of note that there ever has been such a ruthless destruction of forests. No passage in either the Bible or the Talmud permits us to draw the conclusion that in former times the average of rainfall was any greater than it is at present. Ever since meteorological observations have been scientifically taken in Palestine (and in some cases, as in that of Jerusalem, these go back for decades), the climatic conditions have remained practically the same. In fact, the rain-producing causes, such as the near Mediterranean Sea, are the same as they were in Biblical times.

"There is accordingly no evidence of history or science to show that the climate of Palestine has changed materially from the time when the land flowed with milk and honey, to the present age when so much of the country is a stony and barren waste. Other causes have been operative, and these have been chiefly direful and destructive political conditions that began as early as the period of the decline of the Roman empire, and have reached their acme in the corrupt Turkish rule of the last four centuries, the oppression of the officials, the management of the taxes, and the like. The people have in the course of time become indifferent to all progress, as progress only signified new oppression. There can be no doubt that this historic land, if put under proper care and correctly managed, can be restored to its former flourishing condition. The ocular proof of this can be seen in the very flourishing condition of the Württemberg Temple colonies, which were established in 1868 near Jerusalem, Sharon, and Haifa, and which are veritable garden spots in the land, and that, too, in localities that before the days of these colonies were virtually desert land. The fact that the Jewish

agricultural colonies can not make equally good reports is to be explained partly on the ground of mismanagement and partly because the colonists have not the good-will and enterprise necessary for the work."—*Translation made for THE LITERARY DIGEST.*

THEOLOGICAL VIEWS OF EMPEROR WILLIAM.

IT is very easy for a journal in America to attain distinction just now. All it has to do is to abstain from saying anything about Emperor William's utterances on revelation and inspiration, called forth by Professor Delitzsch's recent address on the Babylonian origin of the Old Testament and by the storm of protests which it evoked. The fact that Professor Delitzsch is president of an Assyriological society of which the Emperor is a patron, and the further fact that not only his recent address but the one delivered a year ago on "Babel und Bibel" were given before the Emperor, led to the conclusion that the latter, who by virtue of his office is *summus episcopus* of the Lutheran Church, the state church of Prussia, indorsed the learned professor's alleged "atheistic" conclusions. The Emperor's statement of belief is said to have composed the orthodox critics and to have satisfied them as to his theological position, while at the same time it has pleased the free-thinkers of Germany because it upholds the scholar's right to freedom of research.

The Emperor's statement has been so widely copied that we here reproduce only the more important paragraphs. After rebuking Delitzsch for abandoning the standpoint of the strict historian, and "going into religious and theological conclusions which are quite nebulous and bold," the Kaiser says:

"I distinguish between two different kinds of revelation—one progressive and, as it were, historical; the other purely religious, as preparing the way for the future Messiah.

"Regarding the former it must be said—for me, it does not admit of a doubt, not even the slightest—that God revealed Himself continuously in the race of men created by Him. He blew into man the breath of His life, and follows with fatherly love and interest the development of the human race. In order to lead it forward and develop it he reveals Himself in this or that great sage, whether priest or king, whether among the heathen, Jews, or Christians. Hammurabi was one; so was Moses, Abraham, Homer, Charlemagne, Luther, Shakespeare, Goethe, Kant, and Emperor William the Great.

"The second form of revelation, the more religious, is that which leads to the manifestation of our Lord. It was introduced with Abraham, slow but forward-looking and omniscient, for humanity was lost without it.

"Christ is God—God in human form. He redeemed us and inspires us, entices us to follow him. We feel his fire burning in us. His sympathy strengthens us. His discontent destroys us. But, also, his intercession saves us. Conscious of victory, building solely upon his word, we go through labor, ridicule, sorrow, misery, and death, for we have in him God's revealed word, and He never lies.

"That is my view of these matters. It is to me self-evident that the Old Testament contains many sections which are of a purely human and historical nature, and are not God's revealed word. These are merely historical descriptions of incidents of all kinds which happen in the political, religious, moral, and intellectual life of this people. The legislative act on Sinai, for example, can be only regarded as symbolically inspired of God.

"First, I believe in one only God; second, we men need a form in order to teach His existence, especially for our children, and third, this form has hitherto been the Old Testament in its present version. This form will be positively and substantially modified under the influence of research and inscriptions and excavations. That does not matter."

Professor Delitzsch has not accepted his sovereign's rebuke with silence. He replies as follows, according to a special cablegram from the Berlin correspondent of the *Philadelphia Public Ledger*:

"His Majesty, like myself, is not an orthodox Christian. His views are almost the same as mine. To his statement that I

should not have discussed religion before the laity, my reply is that my audience consisted of intellectual, highly cultured men. The educated people of the whole world are now fully prepared for new scientific knowledge, when it is presented to them in proper form."

Professor Harnack, of Berlin, according to a special to the New York *Sun*, defends Professor Delitzsch, saying that he deserves gratitude for having rectified the prevailing opinion of the Old Testament, and inasmuch as the Kaiser admits that the traditional forms regarding the Old Testament need revision, Professor Delitzsch gained his main object.

Abundant as is the comment on the matter in this country, there is not, as yet, much that is of more than passing interest. The Philadelphia *Catholic Standard and Times* thinks that "the Kaiser has found that meddling in theology is not a bit safer than trying experiments on the Monroe Doctrine, and his way out of the trouble is not a bit more graceful in the one case than the other."

The Louisville *Christian Observer* (Presb.) thinks that the influence of the declaration "is obviously for serious evil." Referring to the list of leaders in whom the Kaiser thinks God has revealed himself, *The Observer* says:

"According to this, the idolatry of Khammurabi, the piety of Moses, the superstitions of Charlemagne, the reformation of Luther, the rationalism of Kant, are all equally developments of God's working in man. Could anything be more confusing than this? These men and their deeds are indeed included in the providential arrangements of God, and their acts permitted by Him. But their conduct is in no sense the result of His indwelling or a revelation of Himself. Can idolatry, superstition, and rationalism be the product of God's inworking?"

"But the Emperor continues with an expression of his opinion that many sections of the Old Testament 'are not God's revealed word,' and that the legislative act on Sinai 'can be only regarded as symbolically inspired by God.' And this he puts forth as satisfactory evidence of his orthodoxy!"

On the other hand, the Pittsburg *Presbyterian Banner* thinks that the Emperor has expressed himself admirably and that "his line of thought is the true and safe one to follow." The Chicago *Standard* (Baptist) thinks it will be "not without influence in restraining the extremes of German rationalism," and *Zion's Herald* (Meth. Episc., Boston) also sees in it a force to "arrest the dangerous inferences and conclusions which were extending the publication of the destructive views of Professor Delitzsch." The New York *Outlook* and *Independent* (undenom.) comment but little and that favorably, while criticizing Delitzsch for going to extremes unwarranted by science.

In Germany, Professor Hilprecht, of Philadelphia, who is visiting in that country, has been called to the front to offset Professor Delitzsch's views. Hilprecht is quoted in the German press as follows:

"Recently the attempt has been made to demonstrate that the purely monotheistic religion of Israel was derived from Babylonia. On the basis of my researches covering a period of fifteen years I must declare that this is an absolute impossibility. The faith of the Israelites could never have had its origin in the Babylonian mountain of the gods, which is full of death and the savor of death."

This has started another controversy, as to Professor Hilprecht's share in the discoveries at Niffer (or Nippur), some of the German scholars depreciating his work in that connection. *The Independent* (New York) enters into a detailed statement of his connection with the excavations, concluding that "while it is true that the toil and responsibility of exploration belong only in a very slight degree to him, but chiefly to Dr. Peters and Mr. Haynes, yet the entire credit for the decipherment of the inscriptions found belongs wholly to Dr. Hilprecht."

THE POPE'S SILVER JUBILEE.

THE impressive ceremonies in Rome commemorating the twenty-fifth anniversary of Pope Leo's coronation have attracted world-wide attention. They mark, as is pointed out by the New York *Sun*, the celebration of a triple event. Leo XIII. has been sixty years a bishop, nearly fifty years a cardinal, and now twenty-five years a Pope. Should he live until May 10, he will have attained to the traditional "years of St. Peter." He is ninety-three years old, and has governed the church longer than any of his predecessors, with the single exception of Pius IX.

The New York *Catholic World* (March) publishes a leading article on "The Great White Shepherd of Christendom." It says, in part:

"He has, first of all, shown that the Church of Christ is independent of human government or human forms of government. Its welfare is not necessarily one with either monarchism or republicanism. Leo XIII. has been foreign to no country, and has been the friend and supporter of every legitimate form of government. But he has gone further, and positively advised those who opposed their legal government at home to support it heart and soul, and make it work for the welfare of the church."

"He has proved to the world, which obstinately refused to believe it, that Catholicity is an intellectual religion; not alone intellectual, but that the speculative reason, dwelling upon the positive, revealed truths, may find more than ample exercise for

THE MOST RECENT PAINTING OF THE POPE, BY MADAME LA MARQUISE CECILE DE WENTWORTH, OF NEW YORK.

"His Holiness Pope Leo XIII., in order to show Mrs. Cecile Wentworth his high appreciation of her beautiful portrait presenting His Holiness in full figure, has been pleased to send to her a souvenir gold medal bearing the date of the year of his Episcopal Jubilee. Rome, March 5th, 1901. LUIGI CARD. MACCHI."

Courtesy of *The Catholic World* (New York).

every one of its powers. Science has prospered under his encouragement, but he has always shown that science—restricted to the material and the sensible—is but a narrowing of the scope of human reason and a debasing of the soul.

"Again, in Scriptural study, which was causing havoc without the church and uneasiness within, which has not yet been altogether arrested, Leo recognized the gravity of the questions which modern Biblical study presents; the legitimate side to higher criticism; encouraged Catholics to keep abreast of modern science and scholarship; and yet he stands to-day as the representative of the church that alone champions the divine authorship and inspiration of the entire Scripture.

"In the matter that is perhaps most practical of all, and for the whole world just now, in the social problems of labor and of capital Leo has stood particularly as a most prominent, heroic figure, with kindness and love in his eyes for all, with words of wisdom on his lips, warning the rich and the powerful that 'he who deprives a laborer of his just wages commits a sin that cries to heaven for vengeance'; warning the laborer, again, not to preach anarchy nor to rob his employers; with prudence, with a sagacity that has won for him the admiration of all, giving to the world the solution of the problem that vexes it most and is big now with evil portent for the future. So by becoming all things to all men Leo would draw all to Christ."

A typical Protestant comment is this from the *Chicago Interior* (Presb.):

"Amiable interest marked with kindly personal congratulations to the aged pontiff, denotes the attitude of the Protestant world toward the celebration of Leo XIII.'s quarter-centennial on the papal throne. Protestantism offers no religious reverence toward the ceremony with which this jubilee has been kept and none toward its central figure; but on the other hand it has no theologic odium to vent against the man or the occasion. It is not necessary to attribute sanctity to the papal office before one recognizes in Leo a man of outstanding eminence and influence in this complex time, or content that his remarkable tenure of a dignity assumed at the verge of threescore years and ten is an episode of current history worthy to have commemoration.

"There have been other papal reigns in which the gravest doubt of exegesis would scarcely have persuaded Presbyterians to take 'Antichrist' out of their confessional polemics against the papacy. More than any other pope of modern times the present resident at the Vatican has escaped in his personality the derogating tendencies of his enormously presumptuous station. Officially committed to an arrogance of claims unequalled elsewhere among men, Leo has yet been a good enough Christian to retain much of the meekness and gentleness of Christ beneath his hierarchal robes. The thunders which he has been obliged to hurl hither and thither, in order that the noisy precedents of popish history may be duly kept in face, he has hurled with a loath hand, having evidently little heart for the rôle of Jupiter Tonans in which most of his predecessors have so reveled. He

has never made a thoroughgoing hater either—not even against Italian royalty, which Pius IX. bequeathed him a commission to hate as a high Christian duty. He has found it easier to love—a second sign that Christ has not been a stranger in the penitential of the Vatican during the last twenty-five years."

Several of the Roman Catholic journals in this country publish special issues in honor of the jubilee. Among the many services held in various cities to commemorate the event may be mentioned that in St. Patrick's Cathedral, New York, at which solemn pontifical mass was celebrated by Mgr. Falconio, apostolic delegate to the United States, and by Archbishop Farley.

THE JOHN WESLEY BICENTENNIAL.

MACAULAY said of John Wesley that he was "a man whose eloquence and logical acuteness might have made him eminent in literature, whose genius for government was not inferior to that of Richelieu, and who, whatever his errors may have been, devoted all his powers, in defiance of obloquy and derision, to what he sincerely considered the highest good of his species." A eulogy such as this is recalled at the present time on account of the revived interest in Wesley, arising in connection with the intended celebration next June of the two hundredth anniversary of his birth. Naturally the Methodists are taking the lead in forwarding this revival of interest in the great founder of their sect. As appropriate to the anniversary, there has appeared a volume of extracts from John Wesley's journal by Percy Livingston Parker, to which the late Hugh Price Hughes furnishes a most readable introduction and Augustine Birrell, K.C., a biographical appreciation. Mr. Hughes says that "Wesley has demonstrated that a true prophet of God has more influence than all

the politicians and soldiers and millionaires put together." Proceeding to contrast the influence of Wesley and John Henry Newman, he declares that "the whole future of the British empire depends upon this question of questions—will George Fox and John Wesley on the one hand, or John Henry Newman on the other, ultimately prevail?"

The unparalleled industry and perseverance of Wesley is graphically described by Mr. Birrell in the following passage:

"John Wesley contested the three kingdoms in the cause of Christ during a campaign which lasted forty years. He did it for the most part on horseback. He paid more turnpikes than any man who ever bestrode a beast. Eight thousand miles was his annual record for many a long year, during which he seldom preached less frequently than five thousand times. Had he preserved his scores at all the inns where he lodged, they would have made by them-

JOHN WESLEY, AT THE AGE OF SIXTY-THREE.

selves a history of prices. And throughout it all he never knew what a depression of spirits meant, tho he had much to try him, suits in chancery, and a jealous wife."

The extracts from Wesley's journal are of vital interest, and read like a strenuous romance of his time. He was mobbed, stoned, insulted, and driven out from this place and that; yet finally he won recognition from even the greatest people of the realm. He preached to miners, merchants, sailors, and to the people of the fields and streets, until he had made Methodism in England, if not acceptable to the higher classes, at least a force to be reckoned with. Take him all in all, affirms Mr. Birrell, he was "the greatest force of the eighteenth century in England. . . . No single figure influenced so many minds, no single voice touched so many hearts. No other man did such a life's work for England."

On the evening of February 26 there was a great celebration of the bicentenary of Methodism in Carnegie Hall, New York, the chief interest centering about the presence and address of President Roosevelt, who was surrounded on the stage by many dignitaries of the Methodist Church. The President's speech was largely devoted to the Methodist Church and the men who built its early history. He noted that the pioneer preachers, among whom the Methodist preachers were most conspicuous, laid the foundations for the moral qualities of the nation. The President said in part:

"Wesley said he did not intend to leave all the good tunes to the service of the devil. He accomplished so much for mankind because he also refused to leave the stronger, manlier qualities to be availed of only in the interest of evil. The church he founded has throughout its career been a church for the poor as well as for the rich, and has known no distinction of persons. It has been a church whose members, if true to the teachings of its founder, have sought for no greater privilege than to spend and be spent in the interest of the higher life, who have prided themselves, not on shirking rough duty, but on undertaking it and carrying it to a successful conclusion."

Estimates of Wesley, mingled to a considerable extent with comments upon the growth and conditions of Methodism, abound in both the religious and the secular press. *Zion's Herald*, the leading Methodist organ of New England, says:

"We are prepared to affirm, for we thoroughly believe, that no one in all the world's history surpasses, and very few, if any, have equaled John Wesley in the completeness with which he dedicated himself to God, in his unselfish, unswerving, whole-hearted devotion to duty. He was simply a consistent Christian, all for Christ and naught for self. His conscientiousness, his benevolence, his industry, leave nothing to be desired in those directions; and the more they are copied by his followers the better for them and for the world. Neither is there danger of laying too much stress on his skill as an organizer, his sagacity as a statesman, his fervor and success as an evangelist, his strength as a theologian, his power as a preacher, and his high attainments in the Christian life. In all these respects his example is to be unstintedly commended. He was filled with an all-consuming zeal to do good. He had a passion for God's glory. He lived for eternity."

THE PULPIT IN THE NEW CENTURY.

It has been said that the ministry is losing its old-time prestige, and that the divinity schools are the only schools in the United States in which the attendance is either at a standstill or on a positive decline. "Young men of nerve and of broad culture," observes the Rev. Jenkin Lloyd Jones, of Chicago, "distrust the ministerial profession; and the 'theolog' is exposed to banter, perhaps ridicule, on the university campus." Mr. Jones writes further (in *The Cosmopolitan*, February):

"And still there never was a time when the great postulates of religion, the fundamental ethical and spiritual principles emphasized by Christianity and the other great religious systems of the world, were more confidently enforced by the thinkers of

the world. Science, instead of limiting, has enlarged the circle of human reverence; history, instead of denying, has reenforced the great Scriptural texts of humanity, and the ethics of the great Nazarene, as set forth in the Sermon on the Mount, and in his great parables, are becoming more and more embodied in state enactments, civic ideals, and economic requirements."

If our preachers have lost their influence, continues Mr. Jones, it is because they have failed "to bring the religious thinking of the world down to date; to formulate religion in the present tense." We quote again:

"Every community waits with more or less conscious restlessness for the voice of the man in the pulpit who will discuss with high impartiality the distractions of the street, who will emphasize the humanities that underlie all the sects, the unities that join tramp and millionaire, coal-digger and coal-baron. There is not a town of five thousand or more in this country where the voice of the reconciler in the pulpit, the one unflinching democrat of the town, would not be heard gladly; and as soon as he convinces that town that he always means what he says, and is always ready to say what he means, he will find a support in that town that will be adequate to the self-denying needs of a public servant. This young man, when he appears, may find himself in a Methodist, Presbyterian, Baptist, Unitarian, Episcopal, or other pulpit; but the label, whatever it is, will not cut much figure. He will stand in that town as a living illustration of the palpable truth to-day that in religion all labels are libels, for they misrepresent more than they represent; they exclude more than they include, of what is near, dear, and essential to the wearer himself. . . ."

"A new catholicism is imminent in religion. Not the 'Catholic Church of Rome,' tho that is the most benignant achievement in human organization thus far reached, but the catholic church of humanity which will include the great mother church of Christendom, and as much outside and beyond as represents the conclusions of science, the organized experience of states, and the longings and humiliations of the human heart."

A similar view is expressed by the Rev. George Chalmers Richmond, of Syracuse, N. Y., in a recent address now printed in pamphlet form "at the request of Bishop Huntington." Mr. Richmond says:

"The power to preach in reality is not given us by any man; it comes, if it comes at all, 'like the outbursting of a fountain from the earth or of the breaking forth of volcanic fires, with spontaneous, original, native force.' It comes as a result of long efforts in school, college, and university to master the elements of our native speech, to put ourselves into contact with the great forces of men and institutions which have shaped the course of history, to make one with our best manhood the true, masterful, and controlling thoughts which have given life and energy to the world, and which as an intellectual increment form our true basis for preaching with authority."

"A man is not ready to preach before he is twenty-five. People do not value what he has to say before that period, and this is about the age when a young student should be ready for his ordination. The mind of a man is hardly open and prepared to grapple with the problems of the universe before that time. No matter how spiritual the fellow may be, no matter how urgent certain women may be in some country parish where the fluency and appearance of the candidate have been magnetic, no matter how eager the youth may be to do the work of his Master and serve his church, his first duty is to study and think, to meditate and discuss upon the great subjects which every preacher must meet and decide in the course of a parish ministry. The first question to be settled to-day is not, 'Do the women like the young minister?' but this, 'How do the young men like him?' 'Has he the qualities which a man admires?' I am making a plea for scholarship in the ministry which, I am well aware, is not the first question to be considered. But it is the question of the age, and of that I am speaking. Service will not do. Social qualities are not sufficient. A good voice is no recommendation. Some men think they can sing the Gospel just as well as preach it. Churches are not built on song. A parish grows to-day because the man who leads it is known to be a man of deep learning in the arts of life and whose ability is unquestioned by the men of the world."

FOREIGN TOPICS.

DECLINE OF GERMAN INFLUENCE.

VARIOUS distinguished Frenchmen and Italians and one no less eminent Dane have come to the conclusion that Germany's influence over the civilized world is waning. They have settled this whole matter among themselves in the columns of the *Mercure de France* (Paris). The editor of that able publication conceived the idea of propounding two questions: "What do you think of German influence from a general intellectual point of view? Does this influence still exist, and is it justified by its results?" The replies were very interesting both on account of their intrinsic value and because the writers of them are well qualified to speak. They are prefaced by these observations of the Paris paper:

"In a recent speech Emperor William proclaimed anew the pretensions of the Germanic spirit to world supremacy. It appears nevertheless that there has come a reaction against the German intellectual influence that was so powerful over masters like Renan and even Taine in France and over the majority of minds during the second half of the nineteenth century. The victories of 1870 won a universal ascendancy for Germany. The French, conquered themselves, practically recognized this preponderance, and thought it incumbent upon them to take instruction from their masters. Recrossing the Rhine, young Frenchmen congratulated themselves upon fruitful methods of work acquired in the German universities. But many of them confess to having been mistaken. Numerous symptoms indicate a decline in the authority conceded to German culture."

To consider, now, the views of the distinguished gentlemen to whom reference has been made. One of them, Maurice Barres, is very influential as a thinker, writer, and leader of public opinion in matters intellectual. He complains that German thought is so abstract, misunderstanding the personal element in life and proving generally barren:

"In German thought everything is rules and exceptions, facts, data, formulas—never the life of things. There is a vast and learned apparatus, but the heart and the imagination do not thrill. The masters are specialists, classifiers. The patience and accuracy of German critics are beyond dispute, but they lose sight of the sense of proportion in things. German teaching, now predominant in history as in philology, can not yield fruit."

The sway of militarism and utilitarianism in Germany is deplored by Alfred Fouillée, of the Institute, a French thinker of much force and originality. Theodore Ribot, the eminent psychologist and man of science, points out that German influence to-day is expended upon the commercially practical. Thought and research for their own sakes have been abandoned. The economist Anatole Leroy-Beaulieu has no faith in the looked-for world-supremacy of Germany or German thought. "The Germans who proclaim German culture deceive themselves." Nor are these views peculiar to Frenchmen, for Max Nordau also thinks German influence upon the world at large is waning. The idea of the supremacy of any one nation he thinks "out of date." He writes:

"It is great men who wield influence, and that not because of their nationality but as a result of their originality. Did Voltaire and Rousseau dominate the thought of the eighteenth century because they were French? No, but because they wrote the 'Philosophical Dictionary' and the 'Social Contract.' The intellectual guides of the nineteenth century were Hegel, Feuerbach, and Humboldt, Comte and Pasteur, Spencer and Darwin. Not one of these great minds could have identified itself with a people asking 'What is your nationality?' Such a question would be worthy of a police official filling out a passport, but not of any one studying the evolution of mankind."

Cesare Lombroso thinks England has to-day more great thinkers and leaders of world-opinion than Germany, while the

United States is striding rapidly forward in the same general way. He thinks Germany is threatened with a loss of force in every direction. The *Nuova Antologia* (Rome) takes the same subject up exhaustively and reaches the conclusion that Germany is not in a position to realize her proud dream of being the dictator of the world's civilization.—*Translations made for THE LITERARY DIGEST.*

BRITAIN'S WAR ON THE LONG JUJU.

THE long Juju, we regret to learn from a contemporary, is an "obscene idol." They think very highly of it in Nigeria, where bands of natives addict themselves to head-hunting in order to maintain a suitable supply of offerings to the god of their idolatry. When Great Britain a few years ago succeeded to the rights of the chartered company that had been administering the vast African region known as Nigeria, the worship of the long Juju was condemned to suppression. That led to a "war" that received little notice because the Boer contest and the Mad Mullah in turn absorbed attention. But events are now coming to a head in this neglected portion of Africa. In southern Nigeria the stronghold of the long Juju has been taken and the idol itself blown into the air. Head-hunting has been checked and the slave trade put down. In northern Nigeria, where the long Juju has never been orthodox, the British authorities in London have had occasion to wonder at the unwillingness of their commander in the field to communicate with them. He was telegraphed five times in a single day without the extraction of a reply. That nettled the people in London, who sent one more message telling the commander in effect to reply or resign. Sir Frederick Lugard, the gentleman addressed, did not resign. He moved against the Emir of Kano, a powerful Nigerian potentate, captured his capital, and is master of the situation. Says *Public Opinion* (London):

"The capture of Kano, the principal town of northern Nigeria, by a British force under Colonel Morland without the loss of a single man, is a particularly smart piece of work, especially as the punishment inflicted on the enemy seems to have been severe. Kano latterly has fallen on evil days, and lost much of its ancient reputation as the mart of the great state of Sokoto. It had become mainly a center of turbulence and outrage, and as it lies within the British protectorate of Nigeria, not very far from the French sphere, it was necessary to read the recalcitrant Fulani ruler a sharp lesson. Sir Frederick Lugard will see that the new Emir whom he will place upon the throne does not follow in the footsteps of him who has just been driven out. The importance of the capture, apart from the humanitarian side, is twofold. It will give Kano an opportunity of reviving the native commerce and industry for which it was famous throughout the Sudan, and it will rob France of further ground of complaint at the condition of things prevailing within the British border line. The imperial Government complains that Sir Frederick Lugard acted without consulting them, but they admit that the expedition was inevitable, and, so far as we at home can judge, it may, we think, be said that the High Commissioner has saved the situation by his ready assumption of responsibility."

Can the Government in London afford to tolerate the cool indifference to its orders shown by Sir Frederick Lugard? This is the question put by the *Paris Temps*, which further observes:

"Sir Frederick Lugard considered that the security of the garrison he had placed in the advanced post of Zaria and the safety of his new capital of Zungeroy, and finally the prestige that constitutes his principal and indeed his only strength, alike depended upon teaching the Emir of Kano a severe lesson. With such notions in his head it was not likely that a man of his temperament and disposition would pay much attention to the timid observations of the [Colonial] department that is without a head in the absence of [Joseph Chamberlain] its chief. Hence he did not hesitate to advance without taking the trouble to obtain the approval of the home Government. It was useless for the official superiors of Sir Frederick Lugard to maintain an air

of good humor, to forgive offenses, even to turn the left cheek after the right, particularly to a strong man's hand. Even an under-secretary of state revolts at last. Lord Onslow took up his best pen and dipped it in his strongest ink to inflict—too late—a fine—but ineffective—reprimand upon his refractory subordinate."

"But Sir Frederick is at Kano," concludes our Parisian contemporary. "That is a brilliant personal triumph."—*Translation made for THE LITERARY DIGEST.*

DIPLOMACY—EUROPEAN AND AMERICAN.

THE old school of European diplomacy with its dynastic considerations and aristocratic traditions, seems unable to hold its own against the new and so-called "American" school of diplomacy which looks mainly to economic considerations and practical interests. It is the *Indépendance Belge* (Brussels) which arrives at this conclusion. Germany, it thinks, will stand by the old school. She is a military autocracy, not amenable to popular influence, and her diplomatic corps must continue to be inspired by the Bismarckian tradition. Count von Wolff-Metternich, German Ambassador in London, is a diplomatist of this stamp. But the system will be modified in aspect, if not in principle. "Germany realizes the tremendous blunder she made in arousing American public opinion by her violence," and her Washington representative will act accordingly: "We are none the less convinced," says the Belgian organ, "that Germany is the only European Power now whose influence is dangerous to the peace of the world."

The London *Spectator* frankly accepts the new diplomacy and seems rather pleased by it. It refers to the British Ambassador in Paris, Sir E. J. Monson, as a favorable specimen of the new order. He makes frank, genial speeches, can take the public into his confidence when the time has come to do so, and does not pretend to be subtle. All this, we are told, is good. The world has no use for Machiavellis. This optimistic tone—so far as British diplomacy is concerned—does not prevail among London organs generally. The consensus of English opinion at the moment is that British diplomacy is at a low ebb, while American diplomacy has attained a high level of capacity and achievement. It is odd to find the London *Times*, *News*, and *Telegraph* practically agreed on this point. The *Times* is not so blunt as *The News*, but it is fairly blunt, especially with refer-

ence to Venezuela. There is a decided tendency among London organs to make a scapegoat of Lord Lansdowne, head of the British Foreign Office. The *National Review* (London), which is most conspicuous in attacking Lord Lansdowne as a diplomatic incapable, observes:

"Lord Lansdowne completed the 'ironclad agreement' with Count Metternich which has done more injury to our prestige abroad than any number of 'regrettable incidents' in South Africa. The press' action in the matter was simply limited to a warning which was not listened to, and it really surpasses the license which is permissible even to a Lord Chancellor to try and make our newspapers responsible for the fatuity of the cabinet. The press's real offense on this question, as on so many others, is not that it thwarts statesmanship or diplomacy—there is little enough of that, heaven knows, to thwart—but that when some ghastly blunder becomes public property it *exposes* the incapacity of certain high and mighty personages—most of whom speak greatly above their ability."

Lord Lansdowne is a serious handicap to British diplomacy, according to Sidney Brooks, who handles the noble lord without gloves in *The Fortnightly Review* (London):

"Englishmen had nothing whatever against Lord Lansdowne up to the time of the Boer War. They thought of him, if I may adopt that caustic aside in which Lord Rosebery in his 'Napoleon' dismisses Lord Bathurst, as 'one of those strange children of our political system who fill the most dazzling offices with the most complete obscurity'; and had there been no war, their opinion of him would probably have remained unchanged. Unfortunately there was a war, and Lord Lansdowne entirely failed to satisfy the country that he was the man for the crisis. True, the system was probably as much to blame as the minister. True, again, that an unsuccessful war minister may quite easily prove a competent foreign secretary. Nevertheless, Lord Lansdowne's promotion greatly shocked the sense of the people, who could not see why a minister who, by universal assent, had failed in one office, should immediately be given another and better one. It almost led them to question the propriety of that excellent principle by which, if you are an Englishman born in the purple, you simply can not be got rid of."

The German press does not share the admiration of the British for recent American diplomacy. According to the *Kreuz Zeitung* (Berlin), American diplomacy has too much "shirt-sleeves" in it, the most conspicuous example being Mr. Bowen, to whom it refers shortly as "Bowen." "Bowen" was "loaned" to Venezuela, and that seems most irregular to the agrarian organ. The *Hamburger Nachrichten* thinks American diplom-

SOME MAKERS OF THE BALKAN CRISIS.

acy has an insolent tone, chiefly because it receives too much consideration from Great Britain.—*Translations made for THE LITERARY DIGEST.*

THE CHARACTER OF CRIME IN MACEDONIA.

NO woman's honor can be safe in Macedonia, or else all Europe is in a conspiracy to malign the Turk. Torture and outrage in specially hideous forms are daily inflicted upon mothers and maids whose names and wrongs, vouched for by witnesses, have been widely printed. The men are overpowered by numbers, burned or impaled or mutilated, while their wives, sisters, and daughters are violated before their eyes. *The Daily News* (London) announces that the details of some cases in its possession can not be printed even for the sake of rousing humanity to action. What it does print is blood-stirring enough, as the extract following indicates:

"'I knew them; I buried them in the same grave,' said Costadin Savoff, one of the priests, in reference to five Macedonians, alleged, by one of the newly arrived, to have been robbed and killed by Turkish soldiers. The five were returning home with money earned in Rumania. Stoian Ivanoff, another priest, declared that in his own village of Batchevo, in the Rasluck district, he knew six women who had been criminally assaulted. To come to a more recent date: On the 17th of January, said Ivan Nikoloff, one of the new arrivals, 'eight men were massacred in my village; I saw their bodies.' The same man charges a Turkish officer, Mehemet Effendi, and his soldiers, with having assaulted a number of women, of whom he mentioned the following by name—Elea Ivanova, Maria

Giorgeva, Susanna Stoinoff. I can make no more than a general allusion to a species of insult—parading women in a state of semi-nudity—to which many refugees from other villages besides the above-named two have testified."

Individual cases in Macedonia present themselves in a way which defy the resources in delicacy of our blunt Saxon speech. One pitiable story is thus put by the same authority:

"The most pitiable story told us by fugitives in this little group was that of two women, one from Bistritza, the other from Strumskichilik village. The former had only just arrived at Rilo. She had been three days and nights in the mountains. This had not been her first attempt at escape into Bulgaria. Two months earlier she had fled with her husband and two children. They were separated. The father and the children succeeded in crossing the border. She now rejoined them. To the statement of the latter, who carried her sick child in her arms, I care to make no more than a general allusion. Separated from her husband, she had fallen a victim to a number of Turkish ruffians. She is one of the more recent arrivals, having reached Rilo three weeks ago. I may here add that the particulars of the abominable kind of crime to which I have alluded, and the commission of which is affirmed in most of the allegations I have taken down, are recorded in the reports drawn up for the relief committee by its secretary, Mr. Schaprachikov, who accompanied the president of the committee, Madame Bakhmeteff, during her journeys to Dubnitsa, Rilo, and other places."

Commenting editorially upon all these things, *The Daily News* (London) says:

"The Turk in Macedonia works in the minor key. He pillages, robs, violates, and perpetrates the brutish tortures which he,

COLONEL YANKOFF,

edonian leaders.

"BRIGANDS" OF THE BALKANS.

alone among European peoples, has handed down from the Middle Ages, and from remoter days of barbarism. His officials and soldiery are not paid, and so they quarter themselves on the population. Reinforcing the acts of the Turks are Albanian troops and brigands, who are to the Macedonians what the Kurds are to the Armenians. Albanian lawlessness has developed of late years; and, indeed, Albania is at once the victim and the avenger on the Christian races of the inveterate misrule of the predominant partner in this ill-assorted empire. The reports before us show that neither life, nor women's honor, nor private property is respected in Macedonia, and that the nominal toleration accorded to Christians disappears when the military are given their head. This is the situation."

A most gloomy view of the situation is taken by the *Reichswehr* (Vienna), which predicts the failure of the reform measures undertaken by Austria and Russia. This view is shared by other observers, who insist that the Powers are concerned not so much about reforming Macedonia as about the political consequences of that undertaking. The Powers are mutually suspicious. Thus the *Sviet* (Odessa) says: Italy is preparing to make a descent upon Tripoli the moment a conflict breaks out between the Balkan Slav states and Turkey. The *Popolo Romano* says Italy has nothing in particular to do with the Macedonian question:

"As long as the Powers concerned with Macedonia remain within the limits prescribed by the Berlin treaty, public opinion in Italy has not the slightest reason for anxiety. . . . Even a repetition of the Bulgarian atrocities and a revolutionary movement in Macedonia need involve no risk to Italy's foreign policy. This is due to the oft-mentioned agreement between Austria-Hungary and Italy with reference to Albania—that is, the portion of the Balkan peninsula with which Italy's commercial and political relations are principally concerned."

Macedonia will succeed in throwing off the Turkish yoke, according to a well-informed but anonymous writer in the *Neue Freie Presse* (Vienna):

"No influence can withhold the aroused Macedonians from revolt. Every effort has been made by them to this end for years past, and it will come to pass if something more than sham reform be not undertaken in Macedonia this spring."

The *Siècle* (Paris) denies all these assertions through another anonymous writer, who says the Sultan will remain master of Macedonia. "Nothing will be changed. There will be only one more plan of reform."—*Translations made for THE LITERARY DIGEST.*

PRESIDENT LOUBET AND THE POPE.

THE dative plural of a Latin pronoun has caused a serious difference between France and the Vatican, and the relations between church and state have entered a critical phase. The Roman curia is much concerned at the refusal of the French Government to permit two bishops, appointed nearly a year ago, to take possession of their sees. The delay is the result of an objection made by the French Government to the wording of the "bulls," or documents instituting the bishops, which are issued by the Pope. In these bulls of institution the Pope employs the formula: "Æmilius Loubet, Præses Reipublicæ Gallorum, nominavit nobis." Hitherto this formula has been accepted without demur. Now, however, the French Premier, M. Combes, wants the word "nobis" stricken out. If the word stands, the Latin formula means: "Emile Loubet, President of the French Republic, has named to us." By leaving out the Latin pronoun the President is made to do the "naming" absolutely. According to the Concordat, the head of the French Government "will name the archbishops and bishops of every see" in France. The *Daily News* (London) observes:

"Pius the Ninth slipped in an unexpected dative pronoun 'nobis.' The wording used by Leo XIII. is: 'Præses Gallorum

nominavit nobis,' which dog-Latin means: 'The President of France named to us.' Napoleon the Third spotted the trick, which tends to whittle down the Government nomination to a mere introduction to the Pope, and he replied by gazetting his bishops without waiting for the investiture. Pius the Ninth ignored them, and the Bishop of Agen, to cite a case, was still unconfirmed when the war broke out. Under the Republic the Council of State registered the 'nobis' bulls under protest, expressing a hope that such an 'irregularity' would not be repeated. Tired of waiting, the Council of State decided in 1901 that it would decline to register bulls not worded according to the Concordat treaty. It has kept its word, and the bishops of Annecy and Carcassonne have not been allowed by Government to take possession of their sees."

On behalf of the Vatican, it is pointed out that as a matter of actual fact the bishops in France are named "to" the Pope by the head of the state. To ignore this fact would be tantamount to conferring upon the head of the French Government a privilege liable to grave abuse, because, in recognizing an absolute right of nomination in him, he would be invested in a sense with the power of canonical institution. One Vatican prelate of great influence, eager to avoid unseemly controversy and to meet every point of view, suggests the formula: "Emile Loubet, President of the French Republic, in accordance with the treaty made with the First Consul in 1801, has named. . . ." But there are political considerations which operate just now to compel the French Government to insist upon its point. "No French Government," says the *London News*, "not even one ruled by the Duke of Orleans, could yield on that word *nobis*." The *Univers* (Paris), however, organ of the French Clericals, warns all priests not to accept nominations to bishoprics offered by the Government. It is evident that such a deadlock, if continued, might produce a curious situation in time, as bishoprics fell vacant. It is believed, by competent observers, that the difficulty will be got over. The *Journal des Débats* (Paris) says:

"Nominations of bishops and archbishops by the French Government have hitherto been preceded by an official understanding between it and the Holy See. There was first an agreement as to the choice. After that, nomination by the Government and investiture by the Pope were scarcely more than formalities. M. Combes wants to change this method. The council of ministers recently called to the bishoprics of Bayonne, Constantine, and St. Jean de Maurienne three ecclesiastics whose designation had not been the subject of previous negotiation with Rome. In proceeding thus, our Government was within its strict rights under the terms of the Concordat. But as nothing compels the Holy See to confer investiture upon prelates it does not approve of, the Pope is also within his strict rights in not delivering the bulls. Between these two equally certain rights, the three dioceses are deprived of bishops."—*Translations made for THE LITERARY DIGEST.*

POINTS OF VIEW.

RUSSIA AND THE PERSIAN GULF.—Russia intends to reduce Persia to a position of subjection to herself, insists M. A. Vambéry, in a strong article in the *Szemle* (Budapest). Hence she is endeavoring to make the Persian Gulf a Russian lake. The task is difficult, but the Czar's navy is growing.

ORIGIN OF THE DANES.—The people of Denmark constitute an ancient race, avers Axel Obris in the *Dansk Tidsskrift* (Copenhagen). Their history can be traced back to the sixth century of our era. If they resisted absorption for so long, they may be expected to resist it for ages to come.

CHINESE WOMEN.—The women of China are not advancing with the rest of the world, concludes the *Quinzaine* (Paris). "As a child, the woman of China is maltreated. Her birth gives sorrow. She is married without being consulted. She is the slave of her husband. Only when she gives birth to a son or becomes a widow does she receive a certain consideration."

DID WILLIAM II. ABUSE EDWARD VII.?—Some little time ago a story was published by *The National Review* (London) to the effect that William II. went aboard an American yacht and told the owner that Great Britain was "decadent," while Edward VII. himself was "abused in language which it is not possible for us to reproduce." The *Norddeutsche Allgemeine Zeitung* (Berlin) thereupon branded this story as "an impertinent falsehood." Now *The National Review* insists that its story was true and that "the Kaiser did perpetrate the appalling indiscretion we have described."

NOTABLE BOOKS OF THE DAY.

A NEW IRISH WRITER.

THE CIRCLE. By Katherine Cecil Thurston. Cloth, 5 x 7½ in., 340 pp. Price, \$1.50. Dodd, Mead & Co., New York.

THE only uninteresting thing about this new novel is its name. It suggests, little and that little is banal. But the story supplies *le mot de l'enigme*. It starts out briskly, and does not flag for a moment through the three parts into which it is divided. The author, Mrs. Thurston, is an Irish woman, born in Cork, and her maiden name was Madden. This is her first serious work in fiction, altho she has had stories printed in the London magazines, her first appearance in print being in 1891.

But if Mrs. Thurston is a newcomer, she is an artist from the start. In this story, beside the unflinching craftsmanship with which she works out her theme, her way of putting a scene before you or painting a character is remarkably lucid, convincing, and engaging.

KATHERINE CECIL THURSTON.

There are only seven or eight characters in the book, but there is not one of them that is not sharply drawn, and of individual force.

There is a slight melodramatic quality in some of the pages, but Mrs. Thurston never loses dignity, and the way she puts a thing, not startling or novel in itself, impresses the reader with all the charm of something new and fresh.

A young girl lives with her father, a Russian Jew, in the East End. He is an antiquary, and keeps a curio shop. Anne Volny's mother is dead, and she and her father lead a life somewhat stifling to Anne. The young girl, vegetating in that sod-

den environment, has that strange force which is called "genius." She is a "born actress," without any notion of this fact. The quiet, ingenious way in which Mrs. Thurston leads to the development of this gift is admirable.

Can new things be done, in art or life, at this old stage of the world? Whether or not they may, the fresh charm and seeming novelty of the few novels which stir are generally only the old things in a new way, *non nova sed nove*. The skeleton of the story and the types employed are not new, and are not even melodramatic. It is the breezy, warm, artistic handling of her elements which make Mrs. Thurston loom as a new and powerful factor in the literary world. Perhaps it is the Celtic strain in her, the impassioned, primitive, eager activity of her Irish blood-corpuscles, which give her the innate power to "dream right." Art there is in her painting of the canvas, for there is no touch of crudity, no faltering in her "method." She is realistic, but not bonily so; idealistic, but not anemically so; earnest, but not self-conscious or aggressive.

In the last analysis it is her touch, her personal grasp and sympathy, that invest her work with its chief attraction. The young man who is the lover, for instance, is really only a more or less conventional Englishman, with nothing pronounced about him in any way; good-looking, not particularly clever, not rich, not distinguished socially; and yet despite his bunch of negatives, what a live, true, wholesome man he is, and what a stunning lover! It is the same with the other characters. There is the old Russian Jew, soul-sore from persecution, and a ruminative scholar; a worldly woman, clever and masterful; a poor, wretched man, cowardly, deformed, a mere straw in humanity's jet-sam and flotsam; and the throbbing Hebrew daughter of the antiquary, who suggests lack of balance and neurotic extravagance. Behold the *dramatis personae*, not too promising to one who has seen these "types" go through their exercises by battalions on the literary "campus." But Mrs. Thurston gives each an "otherness" which redeems and individualizes the type.

A HELPFUL BOOK ON A DELICATE THEME.

THE LOVER'S WORLD. A WHEEL OF LIFE. By Alice B. Stockham, M.D. Cloth, 5½ x 8 in., 470 pp. Price, \$2.25. Stockham Company, Chicago, 1903.

THAT the author of this work has an inborn power to perceive and the gift to express concerning the themes she handles, must be admitted by any fair-minded reader of her book. She is bold, searching, outspoken, yet handles her subject with tact. Doubtless, however, many will differ from some of her judgments anent the laying bare of the most hidden instincts of life, and even resent her attitude toward what she looks upon as mawkish modesty, for it is a deeply rooted conviction in average humanity that this very mawkishness is a precious safeguard to youth. The preface claims that the

whole work is the outcome of "experience and philosophy." The book quite supports the claim, for every page gives evidence that its author is a thoroughly trained physician; and this latter fact again supports its philosophy, to which some readers might otherwise take exception, for the philosophy is emphatically of the New-Thought cult.

As a medical practitioner, Dr. Stockham must have been the recipient of a prodigious number of private and personal confessions. She found "men and women digging their own graves with the spade of ignorance." Hence her self-imposed missionary work, and the complex array of formulas she lays bare toward a higher and happier existence, together with recipes toward the improvement of lives yet unborn. One feels bound to take the book seriously, and certainly the practical sense underlying "New-Thought" theories was never more clearly and convincingly presented. Things that have too often been made to appear confusing and absurd by the medicated minds so prone to handle and air them, are made as clear as daylight by Dr. Stockham.

A little treatise she gives on the woful results brought about through the fear engendered by the misunderstood germ theory of science is worth the price of the book to those who stand in need of such counsel. Lucidly and convincingly the author counteracts this ignorant fear, by showing how the body is kept alive by the workings of myriads of micro-organisms, and that for one inimical germ there are millions of friendly bacteria, which fear alone can transmute into enemies. In short, she does her utmost toward proving—that is now being accepted as an axiom by open-minded people—that fear and worry, not specific disease, are the master-slayers of humanity.

A RELIGIOUS TRIBUNE OF THE PEOPLE.

THE LIFE OF JOSEPH PARKER, PASTOR OF THE CITY TEMPLE, LONDON. By William Adamson, D.D. With portraits and illustrations. Cloth, 5¼ x 9 in., 386 pp. Price, \$1.85 net. Fleming H. Revell Company.

THE religious life of England has owed much of its vitality to the labors of a ministry which is outside of the great and predominant Establishment. The working of the Established Church runs in well-oiled grooves; prescript and precedence have secured its ministers from the toil and hazard of initiative ventures. They fight in well-drilled and thoroughly officered battalions, and their controversial energy is mostly spent in the discussion of such questions as relate to internal discipline, to ecclesiastical ceremony, and the interpretation of doctrinal codes. But there have always appeared in the mother country teachers and leaders outside of the Church of England who, discarding conventionality, have appealed directly to the masses. These men, whose predecessors were Wesley and Whitfield, have been champions of religious liberty, of personal faith, and individual responsibility. If we may borrow an illustration from the annals of ancient Rome, we might call them religious tribunes of the people.

The greatest of these in recent times, who took upon himself a very much ampler investiture than the mantle of Spurgeon, was the late Joseph Parker. He was born of a sturdy north England stock in 1830. His father was a builder and mason who worked among his own hired men. The son was destined for his father's trade, but early experienced that excess of profound enthusiasm for religion which is styled conversion. He began laboriously to shape himself for a preacher. When asked in after years, "What is your hobby?" he answered, "Preaching." "What hobby occupies your time of leisure?" "I have no hobby but preparing for or delivering sermons; they occupy my whole time, and engage the energies of my whole soul."

This was true. He toiled incessantly in this one work, and he succeeded. Any young minister who wishes to learn one great secret of success in preaching should read the third chapter of this life of Dr Parker, where we will find the answer—sleepless toil and the solicitation of severest criticism.

Joseph Parker's first important charge was at Banbury. In 1852 he was called to Cavendish church, the richest independent church in Manchester, and in his letter of acceptance made that stipulation which ever afterward became the rule of his life:

"As a minister I claim the most perfect freedom of action. With regard to my conduct in the pulpit, I must be the sole human arbiter. Under a profound sense of my accountability to the great head of the church, I must adopt such modes of appealing to the people as may appear to my own judgment and conscience best adapted to promote the interests of truth. I promise no deference to usages or precedence; what appears to me right I shall do, and what appears to me wrong and insufficient I shall unequivocally reject."

Dr. Parker has been called the English Beecher. The comparison is

REV. DR. JOSEPH PARKER.

somewhat unfair, altho the pastor of the City Temple sometimes approached the ideal which he has described in justly characterizing the sermons of the American preacher. Such a sermon "was an amazing combination of philosophy, poetry, emotion, and human enthusiasm—all centered in Christ, and all intended to bring men in right relations to the Father."

The secret of Parker's power lay indeed in his evangelical directness and simplicity. He was alternately witty, epigrammatic, and sometimes personal, but his influence with the masses lay in his strong and manly claim for authority among them, as one who accepted the Bible, abhorred sin, felt the love of God, acknowledged the work of the Spirit in men's hearts, and believed in Christ. That he had no time, and perhaps no taste, for criticism, is shown by his "Ecce Deus," a work which in some quarters might counteract, but could never be said to controvert, Professor Seeley's "Ecce Homo," which suggested its publication. But it was not the vocation of Parker to face the philosophic and scientific problems of religion.

The excellent biography which Dr. Adamson has given us is in many ways to be commended to preachers of the Gospel of every denomination. The author is Boswellian in the presentation of his theme; he makes Dr. Parker speak for himself, and he brings a multitude of other men whose words heighten the clearness of the picture. The book is free from exaggerated eulogy, and notable for the calm and judicious estimate which it makes of a man in many ways remarkable, and in some points even great. Young preachers, we repeat, can derive a world of knowledge from this biography.

The illustrations are utterly unworthy of the text.

THE "ARTISTIC TEMPERAMENT" AGAIN.

WHAT MANNER OF MAN. By Edna Kenton. Cloth, 5½ x 7½ in., 292 pp. Price, \$1.50. The Bowen-Merrill Company.

THERE is a class of hysterical novels that a reviewer with a limited space at his command usually passes by. Now and again such a book has certain qualities which entitle it to critical notice in spite of the many points against it. "What Manner of Man" is such a

EDNA KENTON.

book. The theme is an absurd one—the unwholesome wanderings of an overstrained imagination. It is very obvious that the authoress has been diligently reading her Kipling; but in spite of the almost laughable material she has chosen to treat, she has the gift of story-telling. If we had a school for authors, and young men and young women were required to study life before they ventured to write about it, we might have many good stories in the place of immature tales like "What Manner of Man." It is another of the absurdities written around what is known as "the artistic temperament." The author, besides having the gift of story-telling, grasps the picturesque aspect of any scene, and

THE COUNTER-CHECK QUARRELSOME.

THE EGREGIOUS ENGLISH. By Angus McNeill. Cloth, 5¼ x 7¼ in., 210 pp. Price, \$1.25. G. P. Putnam's Sons.

BEHOLD two of the families of our kin across the sea hanging up, as it were, on the literary clothes-line each other's unwashed linen, and gesticulating toward it for the benefit of nice clean nations like the Yankees, and the Germans, and the Russians, and whatever French may have learned the language. It is not an enticing spectacle for us Americans, who are supposed to be strained close in the embrace of kinship with Great Britain, these revelations in the books of Mr. Crossland and Mr. Angus McNeill, of the dirty spots in the character of the Scotch and the English. There must be some weight in the burden of guilt laid by Mr. Crossland (who wrote "The Unspeakable Scot") upon Scotland, else why does the galled jade lash out so with her heels, in the shape of a book called "The Egregious English"?

This protest, like that of the majority of galled jades, is a little too indiscriminate. It hits not only the Englishman, but most of the spectators. That is to say, the sins of which Mr. McNeill accuses the English are common to all nations—the desire for money, rather loose habits, and general bad taste. A rather interesting suggestion which the book furnishes is that if one were making an attack on the French, or the Germans, or the Russians, or the Turks, one could easily pick out

weaker spots for assault than Mr. McNeill has been able to find in the English, or indeed than Mr. Crossland has been able to find in the Scotch. A particularly weak point in the English character, Mr. McNeill has, however, thumped in his chapter on the English soldier—which is by far the best chapter in his book—and that is the Englishman's conventionality. As exemplified in the army, it took the form, before the Boer war, of a stereotyped system of attack. This plan of attack failed before the maneuvers of the Boers, and consequently the English army tactics are in process of reorganization—a reorganization designed to meet Boer tactics. "It does not seem to occur to the poor body," says Mr. McNeill, "that his next great trial is not likely to overtake him in South Africa . . . yet wherever his next large fighting has to be done, he will sail into it in his good, old, infantile English way, armed cap-a-pie for the special destruction of the Boers."

There are other valid objections to the English character which have been pointed out by Mr. McNeill, and there are plenty of amusing phrases which have started up at the author's command, but in the main his criticism of the English loses force because of its exaggeration.

"THE SPLENDOR AND THE HAVOC OF THE EAST."

MEDIEVAL INDIA UNDER MOHAMMEDAN RULE (712-1764). By Stanley Lane-Poole, Professor of Arabic at Trinity College, Dublin. Illustrated. Cloth, 5¼ x 8¼ in., xvii + 449 pp. Price, \$1.35. G. P. Putnam's Sons.

GIBBON sums up the story of Asiatic dynasties as "one unceasing round of valor, greatness, discord, degeneracy, and decay"; and Kinglake, in "Eothen," crossing the border at historic Belgrade, says: "I had come, as it were, to the end of this wheel-going Europe, and now my eyes would see the splendor and the havoc of the East." So shall the reader, passing the portals of enchantment which these pages open to him, behold the long-drawn procession, pageant, and spectacle of splendors and havocs which go to the making of the story of Mahmud of Ghazni, and Firoz Shah, and Queen Raziya, Tamerlane and Babar and Akbar, Jahanghir and Shah Jahan, Ala-uddin and Aurangzib. True, there had been an Arab invasion of Sind, early in the eighth century—invited by the dazzling pictures of adventurers, and their wild stories of gold and diamonds, jeweled idols, gorgeous rites, and a marvelous civilization. Daibul was stormed and taken, and Multan fell; but when a foul and false story reached the ears of the Calif, that his young general had made free with the captive daughters of Dahir before presenting them to the Calif's harem, that splendid boy was sewn up in a raw cowhide and sent to Damascus. The Arabs had conquered Sind, but the triumph was but a barren episode, bearing no lasting fruit.

We hear no more of Arabs as conquerors of India. When the Mohammedan empire, from Mahmud to Aurangzib, is named, it is Turkish empire that is meant; and with the arrival of the Turks under Mahmud the Iconoclast, at the beginning of the eleventh century, India entered upon her Middle Age. The history of this period is necessarily rather a chronicle of kings and courts and conquests than a national growth. "The people" of India enjoy the doubtful happiness of having no history; they are the same yesterday, to-day, and forever. But in the characters and lives of the rulers there is infinite variety. "Such contrasted figures as those of Ala-uddin, Babar, Akbar, and Aurangzib may rival any gallery of portraits that could be brought together in Europe in the same four centuries." In the lives and policies, the wars and schemes, the pageants and the ceremonials of such leaders of men, the imagination finds ample scope for visions of strangely vivid and dramatic situations. As for "the people," the townfolk and the peasants, give them a king, an absolute king, and they are content. "Every Eastern people, if left to itself, sets up a despot"; only let him be strong and masterful, and he may do as he will. His most shameless excesses, his most implacable cruelties, are to be accepted, as plague and famine are. Whatever king may rule, there will still be the old familiar plague and famine to reckon with; and so long as the rice and millet grow, and salt is not too dear, and a man can go unnoticed, life goes much the same and the gods will not meddle.

Moreover, even despotism has its compensations; in the very wilfulness and wantonness of its fantastic caprices and freaks, it includes possibilities of assertion for the humane and the gracious.

Babar is perhaps the most captivating personality in Oriental story; he is the link between predatory hordes and imperial government, between Timur and Akbar. Yet Babar, soldier of fortune as he was, was not the less a man of fine literary taste and fastidious critical faculty. In his native tongue, and in the Persian, he was accomplished in prose and verse; "his battles, and even his orgies, were humanized by the breath of poetry."

"Nine centuries of intimate association have produced no sensible fusion between the Mulim and the Hindu; any more than two centuries of intercourse have blended either with the dominant English." The conquerors have come in hordes, again and again; but they have scarcely touched the soul of the people of India:

"She let the legions thunder past—
And sank in thought again."

These are a few of many houses recently built on our properties and constitute one of many reasons

Why 4,000 Investors Bought \$3,461,000

Worth of Our New York Lots During the Past Year

Nearly three and a half million dollars!—that's the forceful story of our real estate sales during the year just ended. We ask *you* to dwell on these figures long enough to realize—to understand what they really mean. These three and a half million dollars actually represent the confidence which the thousands who have invested in our New York City lots have in us. *You*, perhaps, have not yet invested—not even investigated. This advertisement is written to induce you to let us tell you the great story of our proposition:—

\$10 Secures a \$510 Lot in Greater New York

Within 35 Minutes of These Skyscrapers, by Trolley, 5c.

This carries a free trip to New York (east of Chicago or like distance); a free deed to your heirs in case you die before you have paid in full for your property; the highest class improvements free of cost, etc.; in short, everything that will make a cash payment of \$10, and a monthly payment of \$6 until you have paid us \$510, develop into a life's income.

This is a high-class and strictly honest proposition, or you may be sure this magazine would not permit our announcement to appear. Nor would we have the privilege of referring to twenty odd National Banks, the Commercial Agencies and 30,000 customers all over the United States.

You have absolutely nothing to lose by writing at once for full particulars, or better still—mail us \$10, the first payment on a lot, **with the distinct understanding that we must return it to you if we have misrepresented our proposition in the slightest particular. Write under all circumstances.** You would not be fair to yourself if you failed to look into this matter.

CURRENT POETRY.

The Little Hand.

By ZONA GALE.

O moon-pale blossom that ruffles and dips
And ripples in wind that is sweet with your lips,
I have come to you, hot for the truth about truth.
I have come to find God. If I look in the dew
And the depths of your silk—shall I find him in
you?

How it stirs—little rose! How it stirs and is still!
How it blows, and is sweet, and is terribly still!

Little child, little child—with me here by the rose,
I can find you no truth. What the moon-blossom
knows

Is its secret, for God; and they shut us away.

Take my hand. Let us search for the truth and
the work.

Of the truth through the dead hush of earth.

How it clings—little hand! How it clings to my
own!

Here is Truth! Ah, the little hand clings to my
own!

—In the March Bookman.

The Teamster.

By H. H. BASIFORD.

Ah, who'd go teaming wood on such a morning,
Go swinging on the bob-sleighs, through the frost,
Take any trail, before God's day is dawning,
With twenty miles of prairie to be crossed?
The colts are huddled sadly round the building,
The bitter wind creeps wailing down the plain,
No streak of dawn the starless east is gilding,
And I must rise and take the trail again.

O bride of mine, rest calm—the miles are lonely;
O bairn of mine, sleep sweet—the day is long,
The plains are wide and empty, and I, only,
Go forth at night to travel with a song,
Go forth alone to journey in the greatness
God spread, long since—a russet, tideless sea,
All shrouded now beneath the stars' sedateness,
The battle-ground of life for you and me.

Yet hark, the runners down the trail are ringing,
And see the team is getting into stride,
And slow, and far, the mighty dawn comes sing-
ing,

Comes singing to the conquest of his bride,
Comes singing to the prairie's shy unfolding,
Treads softly, spreading roses on the snow,
Stays never, brooks no secret or withholding,
Till I, too, pay him homage as I go.

And I, too, sing the song of all creation,
A brave sky and a glad wind blowing by,
A clear trail and an hour for meditation,
A long day and the joy to make it fly,
A hard task and the muscle to achieve it,
A fierce noon and a well-contented gloam,
A good strife and no great regret to leave it,
A still night—and the far red lights of home.

FOR ALL KINDS OF FACES

WILLIAMS' SHAVING SOAP

Statesmen, financiers, literary, professional and
business men, and men in every walk in life,
have for more than half a century found com-
fort and delight in Williams' Shaving Soap.

For all kinds of faces, its pure, rich, cream-
like lather is wonderfully grateful and satis-
fying. To the long, thin face, or the short
and full, to the delicate and sensitive or the
rugged and sunburned, Williams' Shaving Soap
is equally comforting and refreshing.

Sold throughout the world, in the form of Shaving
Sticks, Shaving Tablets and Shaving Cream.

Who are They?

How many of the 24 distinguished
men shown here can you name?

To any one sending us the correct name of any 4 of these men,
with a two-cent stamp to cover cost of mailing, we will forward,
postpaid, a correct list of the names, and also a most useful and
ingenious pocket novelty in the shape of key-ring, letter-opener,
paper-cutter and screw-driver combined, an article that every
man and boy will find many uses for every day. Handy for the
chauffeur, the bicycle rider, for opening cigar boxes, watch cases,
for automatic air valves, etc. Unequaled key holder; holds keys
securely, divides the keys—easy to find the one wanted.

PERSONALS.

Reminiscences of Prince Bismarck.

[Sidney Whitman's latest book, "Personal Reminiscences of Prince Bismarck" (D. Appleton & Co.), sets forth, as its title indicates, the personal side of Bismarck as seen through the eyes of an intimate friend. Mr. Whitman knew the Iron Chancellor for a number of years and visited him several times. We select the following incidents from the book:]

BISMARCK'S AMERICAN FRIENDS.—It appears that the Prince was especially fond of Americans, for, according to Mr. Whitman, there were apparently more portraits of Americans in his possession than men of any other nationality. Among the portraits were those of General Grant; Mr. Phelps, and Bancroft. Says Mr. Whitman:

He was also particularly attached to George Bancroft, so that when it became a question of Bancroft's being recalled from his post of United States Minister at Berlin, Bismarck wrote specially to his friend Motley and begged him to intercede with the President to allow Bancroft to remain; and he did remain. Bismarck told me that when General Grant came to Berlin he accompanied him to see one of the reviews at the Tempelhofer Feld. Grant was not well that day, and they had to drive out in a closed carriage. Grant looked downcast, and told Bismarck that it worried him to think that he was to meet the Prussian soldiers sitting coddled up in a carriage like any ordinary civilian. "Never you mind that, General Grant," Bismarck said, "you may sit here hidden from view, but our soldiers are well aware what sort of fighting-man is in this closed carriage."

WHY BISMARCK NEVER LIKED GERMAN CHAMPAGNE.—At one time, while at lunch, Bismarck remarked that he had never liked German champagne, and to illustrate this he told the following story:

"On one occasion I was dining with His Gracious Majesty (the present Emperor). I had some champagne in my glass, the taste of which made me suspicious. When the butler again passed the table I tried to get a look at the label on the bottle, but this was impossible, for a napkin was wrapped round it. I then turned to the Emperor to inquire the name of the particular brand, when His Majesty blurted out that it was indeed German champagne. 'Yes,' the Emperor said, 'I drink it from motives of economy, as I have a large family, and I have strongly recommended it to my officers for the same reason. Then, again, I also drink it from patriotic motives.' Thereupon I said to the Emperor, 'With me, Your Majesty, patriotism stops short at the region of my stomach.'"

BISMARCK IN COURT.—Concerning the more harmless incidents of German Court life, says Mr. Whitman, Bismarck related the following:

"It was occasionally one of my functions to present all sorts of people to the King, and it now and then happened that my head was so full of more important matters that the very name of the person I was about to present lapsed from my memory. When that was the case I used to put a bold face upon it, and, there being no time to inquire after names, I bluntly presented a man I did not know as Count Solms. You see, there are so many Count Solms that the King could not pos-

sibly know them all by sight. On the other hand, a man whose name might be Müller or Schulze was not likely to take it very much amiss if he were presented as Count Solms, which, after all, is a good family name. I got out of my difficulty in this manner on more than one occasion, and it never failed."

BISMARCK'S INTENSE MELANCHOLY.—One of the strongest impressions Mr. Whitman obtained of Bismarck was of his "solitude—his intense melancholy." He says:

Bismarck had suffered from fits of depression, as is well authenticated, right through life. Melancholy is an essentially German trait of character, and may not be unconnected with the state of the stomach, as Hamlet said dreams are. In every case it is often met with in highly developed natures, a form of morose pessimism which affects them at times. . . . Bismarck, with the consciousness of having altered the map of Europe and revised the German empire, could scarcely exist outside his own four walls. . . .

Bismarck had moments between 1890-91 when the idea of suicide may possibly have been present to his mind. His religious faith, added to his strong sense of personal dignity, probably prevented the thought obtaining complete possession of him. Lord Clive—a rare exception among great Englishmen—committed suicide. Bismarck was not without affinity to Clive in more respects than one, notably in his insensibility to the meaning of fear.

Mark Twain's Faithful Servant.—One evening last year, while Mark Twain was spending some time at his summer home, says *The Saturday Evening Post*, he prepared to take a drive, expecting to remain out until late.

He therefore told his hostler that he need not wait for him, instructing him when he had finished his work to lock the stable and place the key under a stone, the location of which Mr. Clemens described with much exactness.

When Mr. Clemens reached home after his drive he was surprised to find that the key was not in its place. When his patience had been exhausted he awoke the hostler and received this explanation:

"Mr. Clemens, I found a better place."

Archbishop Ireland's Retort.—A real estate dealer, who had charge of considerable real estate belonging to Archbishop Ireland, says the *New York Times*, tells this story about the distinguished divine, which illustrates the quick wit of the gentleman in turning a corner when in a tight place.

The real estate agent was caught short on some

The Greatest Test of Power

in an automobile, as in mankind, is the ability to climb to higher levels. There would not be so much enjoyment in automobile touring if you were obliged to feel a little doubtful about the way your car would respond when called upon to conquer steep and rugged grades. Doubts are cast to the wind when you drive the

Winton

It will not only master any grades open to traffic, but do it with the pleasing dash possible only where there is an abundance of power always available. The Winton Touring Car has won quite as many laurels for hill-climbing as for speed and endurance, and, of course, there are reasons for it. One is that it has more horse-power for each hundred pounds of weight than any other car upon the market. Again, all of its power is available, not being absorbed by a cumbersome transmission.

The new 20 horse-power, double opposed cylinder, Winton Touring Car, with one filling of gasoline, lubricating oil and water, will travel, at a 30 to 40 mile per hour clip if desired, over 150 miles. There are a great many other features about this 1903 automobile triumph to interest those contemplating the purchase of a high-grade car.

The price, complete with detachable tonneau, two full-brass side lamps, tools, etc., is \$2,500. Visit any of our branch or agency depots in two score leading cities and the many features of Winton excellence will be fully demonstrated.

THE WINTON MOTOR CARRIAGE COMPANY, Berea Road, Cleveland, U. S. A.

Learn Good Manners BY MAIL

Seventeen of the most famous social writers in the country, including:

Mrs. John Sherwood	Mrs. Burton Kingsland
Adelaide Gordon	Mrs. Ella Wheeler Wilcox
Mrs. John A. Logan	Mrs. Harriet Hubbard Ayer
Marion Harland	Mrs. Margaret E. Sangster

have just prepared a course of instruction in correct social usage for the guidance of all who wish to appear well and those who wish their children to appear well.

It teaches the correct thing to do, to say, to write, to wear on all occasions. A complete guide to perfect ease of manner. Worth many times its cost as a work of reference. Good manners are to-day essential to either business or social success; a parent's duty.

investments of his own and his client's, and it was decided that he and the Archbishop must hasten at once to New York, where they had moneyed friends who they expected would help them out. The reverend gentleman suggested that they go the next day, which was Sunday. The real estate man was somewhat shocked at this suggestion coming from the source it did, and said that he never traveled on the Sabbath, as it was contrary to the Scriptures. The Bishop saw the point, and rubbing his hands together, replied that he, too, had a text that might apply: "'If thy ass fall into the ditch on the Sabbath day you must straightway take him out,' and as there are two asses in this case we had better be lively."

It is perhaps needless to say that they left for New York on Sunday.

Doctor Parker's Rugged Kludness.—The late Rev. Dr. Joseph Parker, of London, was once approached in the City Temple by a country clergyman, says *The Youth's Companion*, and asked to preach in his village on any day and at any hour that might suit his convenience.

"It is impossible," replied Dr. Parker. "I have already more engagements than I can fulfil."

Mrs. Parker, who was present, saw the minister's look of disappointment. "My dear," she said to her husband, "you must go. This gentleman has come a long distance to see you, and you must make it possible."

"Well," said he, looking into the face of his rural brother, "you see I must go. Fix your day, and I will be there at twelve o'clock."

The village pastor returned his thanks, and went his way with a radiant countenance. The day came, the church was crowded. Doctor Parker preached in his usual telling manner, and pleaded for a generous offering as he alone could plead. At the conclusion of the service the pastor came into the vestry, and expressed his indebtedness to Doctor Parker and the gratitude of the church for his valuable services, asking at the end:

"How much, doctor, are we in your debt?"

"Forty-nine pounds, nine shillings and sixpence," promptly returned Doctor Parker.

This staggered the minister, who managed to stammer out, "It will take a little time to pay it all."

"Well, I will not take less," said Doctor Parker. "And meantime, as you have been out of pocket through coming up to see me in London, take this"—placing two sovereigns in the minister's hand—"to cover your outlay. Mind, not a half-penny less to me than the sum named—but you can take eternity to pay it."

Doctor Parker would accept nothing but third-class fares when he visited poor parishes, but went to the church that had a reputation for meanness in money matters.

Venezuela's Irresponsible President.

Spending many weeks in Venezuela recently, William Thorp had opportunity to study President Castro in his palace at Caracas and during his holiday festivities at La Victoria, when he threw off his official responsibilities and revealed clearly his personal characteristics. In an interesting article in *Harper's Weekly* Mr. Thorp writes:

It is impossible to conceive a more irresponsible person. He knows nothing of the obligations of statesmanship or the power of foreign countries. When I spent Christmas with him at La Victoria he told me that he was profoundly disappointed at his inability to fight the warships of the Germans, the British, and the Italians. "If Venezuela had a navy, however feeble," he said, "we would soon settle this matter one way or the other. We would sail out and attack them. If they had the courage to land troops, I would lead my brave soldiers against them, and rout them with terrible slaughter." On another occasion I met him at La Victoria in the middle of an open-air fiesta. He was dancing under the trees in a very lively and frolicsome fashion with the peasants of the neigh-

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

System Doesn't Mean a "Scheme"

Probably no word in the English Language is more persistently mis-used than the term "**System**." Every man with a plan for handling a part of office routine calls it "A System." There are venders of so-called "systems" all the way from printers to furniture manufacturers.

A Baker-Vawter System Means "Something Complete"

—rounded out, providing for every contingency, reducing every factor to a **known quantity**. There is no such thing as a perfect "ready-made" system; just as no two business houses face exactly the same problems.

If we provide a complete **Baker-Vawter System** for your business it will not be a one-day task, like choosing some furniture. It will take time and study; but when we have finished, your institution will be so organized that all work will be assigned to those employees best fitted to care for it. **The greatest economy will prevail.** You can lay your finger any moment on the pulse of your business and gauge every feature exactly. We have a series of leaflets telling about it. Shall we send them?

borhood and some ladies he had brought with him from Caracas. I had to ask him whether he would apologize to the allies if they demanded an apology. I asked his factotum, General Linares Alcantara, to procure me an opportunity of speaking with the President, and showed him a cablegram which I had just received from Washington. "It is impossible," said Alcantara, with a gesture of despair; "the President dances. He does not do business. He has done no business for a week. He may do no business for another week. Perceive! I have here fifty telegrams from Mr. Bowen, from Washington, and from our government officials in Caracas. They are unopened. The President would not thank me to show them to him while he dances, and he has danced for a week."

Presently Castro perceived me, with an open cablegram in my hand, and he walked over to me, his partner hanging on his arm, and asked what it was about. I told him that the allies were reported to have demanded an apology from him.

Immediately he struck a Napoleonic attitude, waved his arms excitedly in the air, and exclaimed: "General Castro never apologizes. He will not apologize. He has nothing to apologize for. He demands an apology from the allies."

The girl, still hanging on his arm, clapped him on the back, exclaiming, hysterically: "Viva Castro! Viva Venezuela! Bravissima Cipriano!" The crowd took up the cry, whirling around their partners in an excited fandango, and beating the empty bottles from which they had been drinking on the little iron tables which stood around.

When Kubelik Played in an Insane Asylum.—The approaching marriage of Jan Kubelik, the violinist, to the Countess Marianne Csaky, recalls the following incident which he recently told, which is reprinted in the *New York Times*:

"I was asked to play before the inmates of an insane asylum by an alienist," said Kubelik, "the doctor believing that music was a fine medicine for unbalanced minds. I accordingly accompanied him to the institution, where he introduced me, and I said I would favor my hearers with something gay and happy.

"I hadn't intended to do this, but following his suggestion, I played a brilliant Slav composition, which I hoped would be joyous enough. The crazy folk were all seated about the platform in chairs and seemed to be intensely interested. As I finished, a very pretty young woman rose and beckoned to me. I thought, artist-like, that she wanted an encore, and so said to the doctor:

"Ask her what she desires."

"He rose to his feet and was about to question her, when she exclaimed:

"To think of the likes of me being in here and he being at large in the world!"

"That was the last time I ever played in an insane asylum."

The Statesmen's Daily Parade.—With his slouch hat pulled down rakishly over his eyes and a half-burned cigar in his mouth, "Uncle Joe" Cannon, the Speaker of the next House, rides to the Capitol each morning on the tail end of a

street car, says the Washington correspondent of
the St. Louis Post-Dispatch. He adds:

His hands are jammed down in his overcoat
pockets, and "Uncle Joe" is willing to, and does,
argue religion, politics, or almost anything else
with whomsoever braves the cold winds and rides
on the platform with him.

Representative Cannon's early morning ride to
the Capitol is an event. Colleagues wanting special
favours from the Committee on Appropriations,
of which he is chairman, wait to find him alone on
the car, and talk matters over quietly with him.
Generally they get what they want, as "Uncle
Joe" is usually in a cheerful frame of mind before
the harassments of a legislative day begin.

Speaker Henderson rides to the House in his
own carriage. Occasionally he has a companion,
but generally he is alone. He leaves the Capitol
in the same way. Senator W. A. Clark, of Mon-
tana, and Representatives Sibley, Joy and Bel-
mont go to work each day in automobiles. If
Senator Clark does not ride up in his big red auto-
mobile, he drives up in what is known as a "night-
liner." This is a ramshackle old cab. Senator
Clark seldom walks in the morning, but at night
he frequently wanders about the streets alone.

The Southerners, a majority of whom live in
the downtown hotels, walk to the Capitol each
morning. They do not keep carriages, and as one
of the oldest statesmen of the South once said:
"I'm afeared of them kyars." Generally they
leave the Metropolis and National Hotels about
the same hour, and start out in single file, gradu-
ally getting together as they approach the Cap-
itol. Sometimes a party of ten or twelve mem-
bers file solemnly into a saloon on Pennsylvania
avenue on the way to the Capitol, as solemnly
take a drink, and then all walk out in the same
formation as that in which they entered.

The Western men, accustomed to early rising,
get up early, make trips about the various Gov-
ernment departments looking for something of in-
terest to their constituents, and then drop up to
the Capitol much as tho they were going to their
offices. Senators Hanna, Depew, Spooner, and
Platt of Connecticut ride up on the street cars.
Both Senators Hanna and Depew have had un-
fortunate experiences with street-car conductors
because they got aboard without money enough
to pay fare.

But no matter how the statesmen get to the
Capitol, all in the afternoon walk to their homes
and hotels. When the gavel falls for the adjourn-
ment, they leave in groups of twos and three, and
go swinging down Pennsylvania avenue. The
late Speaker Reed used to head the delegation
coming up the avenue. The procession is now led
by Representative Cooper, of Wisconsin, chair-
man of the Committee on Insular Affairs, and the
Western contingent. Following them come the
New Englanders and the members from the Middle
West. Bringing up the rear are always the
Southerners. They stop and look in the windows,
and apparently enjoy their stroll.

Even the Justices of the United States Supreme
Court join in the parade of statesmen. Unlike the
Senators and Representatives, the Associate Jus-
tices invariably walk up the south side of the ave-
nue. In this way they are not jostled by the pe-
destrians, but many a dignified Associate Justice
has had to skip nimbly out of the way of a team-
ster rolling down a skid, a barrel of kerosene or
sugar.

MORE OR LESS PUNGENT.

serving-man, "but he ees mistaken; eet was no consommé, eet was bouillon!"—E. J. APPLETON in *Lippincott's*.

Inquisitive.—"As old Robinson was walking along the principal street of his native town something new struck his eye in the window of the watchmaker's shop.

It was a large handsome clock, and from it was suspended a card bearing the words:

"Goes 300 days without winding!"

Suddenly an idea struck him, and he went into the shop.

"That's an interesting clock of yours," he said; "but there's one thing I should like to know."

"What's that?"

"How long it would go if it was wound up?"—*Answers.*

An Unfortunate Joke.—Leoncavallo tells a very amusing story of himself. One day when visiting a town in Italy, he heard that his opera, "Pagliacci," was to be produced and decided to hear it incognito.

It was not generally known that the young composer was in town.

It happened that his seat was beside a bright-eyed and enthusiastic young lady, who, noticing that he did not join in the general applause, but remained quiet, turned to him and asked:

"Why do you not applaud? Does it not suit you?"

Leoncavallo, much amused, answered:

"No; on the contrary, it displeases me. It is the work of a mere beginner, not to call him anything worse."

"Then you are ignorant of music," she said.

"Oh, no," replied the composer.

Then he proceeded to enlighten her on the subject, proving the music worthless and entirely without originality.

"See," said he, "this motif is—" and he hummed lightly a short melody; "this aria is stolen from Bizet, and that is from Beethoven." In short, he tore the whole opera into pieces.

His neighbor sat in silence, but with an air of pity on her countenance. At the close she turned to him and said, "Is what you have said to me your honest opinion?"

"Entirely so," was the reply.

"Good," said she, and with a malicious gleam in her eyes left the theater.

Next morning, glancing over the paper, his eye fell upon the heading, "Leoncavallo on His Pagliacci," and reading further was somewhat startled to find the conversation of the evening before fully reported and accredited to the proper source.

He had, unfortunately, played his little joke on a reporter, who had proved too smart for him.—*London Tit-Bits.*

Signs of the Times.—In a Montana hotel there is a notice which reads:

"Boarders taken by the day, week, or month. Those who do not pay promptly will be taken by the neck."—*London Tit-Bits.*

Princeton "Tiger" Roars.—FIRST TOWN URCHIN: "How'd ye fall in the canal?"

SECOND T. U.: "Who told ye?"

FIRST T. U.: "Yuh look clean."

In joke I called her a lemon nice,

And said I'd be the squeezer,

But I felt more like a lemon ice

And she—well she was the freezer.

For Example.—PERKINS, JR.: "Why don't ye buy that horse of Seth's, pop? He's got a fine pedigree."

PERKINS, SR.: "Pedigree be gol darned! The question is, is he wuth anything? Why, boy, them sassiety folks what comes here in the summer has pedigrees."—*Brooklyn Life.*

My Mother's Good Old Times.—

By LOWELL OTUS REESE.

On my head the frost is gath'ring with the lim-
ning of the years;
On my features are the records of a thousand
hopes and fears;
In my check-book there is written that which
forty years ago
Would have made my being tingle with a wild ex-
ultant glow;
But alas! within my spirit there's an ever-present
ache
For the old corn-beef and cabbage that my mother
used to make.

I remember when I wandered o'er the hills in boy-
ish glee;
And the dinner horn's loud echo brought no bod-
ing thoughts to me;
I was young and I was happy; and my stomach
ne'er went back
On a single proposition that my teeth would dare
attack!
Never thought I of dyspepsia as I charged the
jelly-cake
And the old corn-beef and cabbage that my
mother used to make.

But the years have brought prosperity. The serv-
ants in my halls
Keep their straining ears a-quiver for the faintest
of my calls;
I have eaten of the fattest; I have drunk the rich-
est cup—
Just to realize at last that these have used my
stomach up;
And I'd give my last possessions to be able to par-
take
Of the old corn-beef and cabbage that my mother
used to make.

All the years I've sought the dollar, struggled
upward slow and sure,
With my pocket growing wealthy and my stom-
ach growing poor;
Every year I find my table more with luxuries
replete;
Every year I find that fewer are the things that I
can eat!
Till the pathway back to childhood oftentimes I
yearn to take
To the old corn-beef and cabbage that my mother
used to make.

And sometimes in blissful moments I will fall
asleep and dream
Of the russet buckwheat steaming and the sor-
ghum syrup's gleam—
Dreams that once more I am living where Welsh
rarebits are unknown
And the noon hour unacquainted with the sad
dyspeptic moan;
Then I jeer at pepsin tablets and forget my
stomach-ache
In the old corn-beef and cabbage that my mother
used to make.

—In *Leslie's Weekly*.

Quite True.—SHE (estatically): "How kind of
nature to bestow upon the blind the faculty of
distinguishing colors by the sense of touch!"

HE (philosophically): "Yes; but it's not alto-
gether confined to the sightless. A fellow needn't
be blind to feel blue."—S. R. J. in *Lippincott's*.

Pears'

the soap which began its

Dr. Whitehall

The Physician's Gazette said of him in 1892:

"An astute student and sturdy character of
Indiana, who reflects credit upon the medical science
of that progressive state."

A physician who really conquered

RHEUMATISM. FREE TEST TREATMENT

It is difficult to realize that a single preparation
will conquer the worst cases of chronic and acute
rheumatism. But this is true. Dr. Whitehall's
Rheumatic Remedy, sold by druggists everywhere
at 50 cents, is doing this in 75 cases out of 100. The
doctor says: "I pledge my word there is not one
iota of exaggeration in this estimate; and to help
you realize that this is true, I will forward on ap-
plication, a free proof treatment, I do not guar-
antee a free cure, but I do guarantee to convince
you that this remedy will conquer rheumatism."
The free proof treatment will make you feel like a
new being at once. No cost, remember, to be con-
vinced of the realness of this grand fact that your
rheumatism can be cured at home, easily, simply,
pleasantly and at trifling cost.

A large practice, yielding from \$100 to \$500 each,
for guaranteed cures, was brought to an end by
success obtained: combining all the elements of
this formerly expensive treatment into one single
formula now selling to the public in drug stores
everywhere at fifty cents a box.

Do right and write right now.

Maybe You're Wrong

when you think you know a
thing or two about illumination.
Did it ever strike you that a light
that is brilliant and nothing more is
just about the poorest light for
your home? Take

THE ANGLE LAMP

for example. It's more
brilliant than gas or
electricity, but it has
quality. It has the pec-
uliarly beautiful soft-
ness which comes from
oil properly combusted.
When you see the Angle
Lamp at work once you will under-
stand why it is now used in thou-
sands of the best American homes. It is ideal
for all places as it requires little or no atten-
tion, never smokes, smells or gives any
trouble, is absolutely safe and as for econ-
omy—we'll it burns just eighteen cents
worth of oil a month. This light is
worth knowing all about. You
can read the story of good light
by sending for our Catalogue

JONATHAN, A TRAGEDY

A charming volume of verse by Thos. Ewing, Jr. By
mail, \$1.07. Funk & Wagnalls Company, Pubs., New York.

\$24.00 BUYS THIS "MACEY" GENUINE OAK

desk, No. 27A, exactly as illustrated, direct from our factory at Grand Rapids, Mich., Freight Prepaid east of the Mississippi, and north of Tennessee (points beyond equalized), sent "On Approval," to be returned at our expense if it is not the best roll-top desk ever sold at the price. (Ask for complete description.)

THIS DESK is 50 inches long, 30 inches wide, and 48 inches high; it has quartered oak front, closed back, front base mould, 22 pigeon holes, 9 oak front file boxes, 2 arm rests, large center drawer (with lock) ball-bearing casters, 2 ink wells, 5 large anti-friction pedestal drawers, 2 pen racks, 2 stamp drawers, 1 card index drawer, 8 letter files with indexes complete (with lock)—Macey-Pascal patent curtain lock, mouse and dust-proof bottoms. It is made with our sectional construction by which it can be quickly taken apart and put together, and the entire desk has our special velvet polish finish. It is strictly high-grade in every respect.

NOTE:—We make these desks in large quantities and can ship promptly.

Never in the history of the entire desk business has a HIGH roll-top desk, so complete, of equal size, and strictly high grade in every detail, both of material and finish, been sold direct to the user by a factory at any time, on such liberal terms and at so low a price. This is a strong statement but the desk itself merits it.

His Name Wouldn't Come.—It was recently in a well-known country club and one of those rare occasions of conviviality in which the best of men like to indulge. The party numbered a dozen, all prominent locally and some whose fame is more than local. A good spirit prevailed, and the feeling manifested itself in a brilliancy of speech that bubbled from every one present to such an extent that an impromptu toastmaster was chosen to keep it in curb by having each speak in turn.

So up rose Mr. Toastmaster and, casting his eye about the board, let it rest upon the man the fountain of whose eloquence was first to be let loose.

"Gentlemen," said the toastmaster, "as becomes the occasion I will introduce the wittiest man first, Mr. —" (pause).

"Gentlemen, I take pleasure in introducing to you one whose name is a household word—" (pause and embarrassment).

"Gentlemen, it affords me great pleasure to introduce a man whose name stands for civic pride and all that is best in this community—" (pause and embarrassment).

"Gentlemen, the man I am about to call upon first is known to me for the past twenty years, and to some of you perhaps longer. I will not dwell upon his qualities, his talent. They have made him famous. You all know to whom I refer. The man whose name rushes to all our lips—" a long pause. "I refer to the third gentleman to my right"; and as the toastmaster sat down amid uproar he said to his neighbor, "I'll be hanged but his name wouldn't come."—*London Tit-Bits.*

As He Liked It.—"George," said Mrs. Ferguson, "it's too bad about that lot of mechanical toys you gave Willie for a birthday gift. Every one of them went to pieces in less than twenty-four hours." "Yes," replied Mr. Ferguson; "the chap I bought them of promised they would."—*London Tit-Bits.*

Where There's a Will, There's a Shall.—MONSIEUR MOUTON: "I would of Mademoiselle beg to know ze rule grammairre ven shall I say I will, and ven will I say I shall."

MISS KLEVVOR (graciously): "Why, that will be very simple, Monsieur Mouton. Wherever you now say I shall, you should say I will, and wherever you say I will, say I shall instead."—*Life.*

More to the Point.—THE PARSON: "I intend to pray that you may forgive Casey for having thrown that brick at you."

THE PATIENT: "Mebbe yer Riv'rence 'ud be saving toime if ye'd just wait till I get well, an' then pray fer Casey."—*Brooklyn Life.*

Misunderstood.—MR. ROY (giving directions): "Are you sure you have it all down pat?"

NEW GROOM: "Me name's Barey, sor."—*Princeton Tiger.*

The Way to be Polite.—SMITH (in the Union):

"Will you get some more ice-water?"

BOY: "If what?"

SMITH: "Oh,—if you please.

BOY: "If you please what?"

SMITH: "Will you kindly get some ice-water, if you please, sir?"

BOY: "That's better. No, I won't."—*Harvard Lampoon.*

His Worry.—"Percy, ma boy, I'm worrid to death about something." "What in the world are you worrid about, old chap?" "That's the twobble—for the life of me, I cawn't wemember."—*Life.*

Dramatic Truths.—You can't tell a theatrical manager by the company he keeps.

Altho building-contractors are not actors, yet we often see them "bringing down the house."

The farmer in the rustic play is liked; the hero receives applause; but no one takes as well as the pickpocket.

Because an actress, on the stage, has wings on either side of her, does not prove that she's an angel.—*Smart Set.*

"Wonderland 1903"

Will be 'Ready about MARCH FIRST

In it the Northern Pacific furnishes this entirely new series of articles, descriptive of the Northwest.

Priest and Explorer
Relates the travels and captivity of Father Hennepin, the Franciscan Priest, among the Indians in the Minnesota country in 1680. Hennepin wrote the first description of Niagara falls and discovered St. Anthony fall.

The Last of the Mandans
Describes a visit to the tribe of Mandan Indians, memorable in the annals of Lewis & Clark, and some of whom still live on the upper Missouri river.

Nature's Masterpiece
Which is Yellowstone Park, is newly described and illustrated. The Government is spending large sums in improving the roads in this WONDERLAND.

Irrigation in the Northwest
Shows the great progress made in irrigation in the far Northwest, and its adaptability to this region.

One Hundred and Fifty Miles with a Pack Train
Recounts an experience in the rough mountains of the Clearwater country, Idaho, with a pack train, while engaged in exploration.

In the Shadow of the Olympics
Describes that part of the Puget Sound region lying west of the Sound and in the vicinity of Port Townsend—an ideal health resort.

Columbia River and Mount Hood
Tells of the finest river and river scenery in the United States and one of its grandest snow capped mountains.

THE BOOK IS APPROPRIATELY ILLUSTRATED, ALSO HAS MAPS AND GIVES TOURIST RATES TO ALL POINTS IN THE NORTHWEST.

Send SIX CENTS for the Book to CHAS. S. FEE, Gen'l Passenger Agent

J. CAMBRIDGE WHARTON, M.D.
102 West 80th Street,
New York, February 3, 1903.

Ozomulsion Company, N. Y. City:

GENTLEMEN—I feel I must write you about the wonderful success I have had with your Ozomulsion.

Particularly in one case of incipient consumption. This patient came to my office in November, 1902. He was emaciated, had a constant cough, with night sweats, and all the symptoms of Phthisis Pulmonalis. A microscopical examination of the sputum showed the characteristic tubercle-bacilli.

I prescribed Ozomulsion, telling the patient when I did so, that I thought I could not help him any. Much to my surprise, the first bottle was of marked benefit to him. He has taken in all six bottles and has gained ten pounds. His cough is very slight and he feels so much better that he has gone back to his work as salesman.

I can endorse your Ozomulsion in every way. I have prescribed it in many cases of Bronchitis and in wasting diseases, where a real food was needed. One thing that impressed me was the fact that Ozomulsion did not interfere with digestion, as so many preparations of Cod Liver Oil do.

Yours truly,
J. CAMBRIDGE WHARTON, M.D.

Cooked Starch CAUSES OBESITY, CATARRH AND CONSUMPTION

Natural Food Cures these Conditions

Below you will find my reason for this statement

MY DEAR FRIEND:—You have often heard it stated that human beings cannot digest raw starch. This statement is based upon experiments performed in the laboratories by chemists with artificial digestive juices. The chemist takes these juices and puts them into his little glass and then adds raw starch to them, and of course the starch is not digested. He therefore loudly proclaims to the world that human beings cannot digest raw starch. The same experiment would go to prove that animals cannot digest it in spite of the fact that we know they are digesting it. This is not only true of animals, for I, together with thousands of others, have been doing this for several years. Even my baby digests starch with ease.

POOR CHEMIST! If he had only experimented with his own stomach in the place of experimenting with artificial juices he would have come to an entirely different conclusion, and thus saved the world much misery.

To take a weak stomach and say that it should digest large quantities of the raw material is very much like expecting a man with neglected and flabby muscles to lift a heavy weight, but surely a man's stomach will never become strong unless he allows all of its functions to develop by proper exercise.

Therefore, in the place of continuing to make the stomach weaker by the use of cooked starches how much wiser it would be to adopt a diet properly suited to the requirements of the individual and allow the individual's organism to do its own work. From a practical standpoint I find that raw starch is easily digested by the human stomach in quantities sufficient to fill every requirement of the human system. On the other hand, if you make the starch abnormally soluble by cooking it, it soon weakens our digestive organs by depriving them of their natural work, and abnormal quantities of starch enter the blood, without being thoroughly prepared. In some cases the system has the power of storing this extra starchy material in the shape of fat, thus causing Obesity, but, in most cases, this material circulates in the blood, and overheats the organism, irritating every cell in the body. As soon as the cells are irritated they throw out a viscid secretion to protect themselves. This secretion when cast out through the mucous membranes lining the nose, throat, chest, stomach, alimentary organs, etc., is called Catarrh, which is the foundation of over half the diseases to which the human system is heir. If it is cast out through the mucous membranes of the head, it is called catarrh of the nose and throat; if through the stomach, we have indigestion and dyspepsia; if through the kidneys, we have Bright's disease; if through the genital organs of the female, we have the various complications common to women; if through the genital organs of the male, we have a long list of troubles, winding up in the destruction of these organs. If the general system is affected, we have a condition of general mal-assimilation. If catarrh of the chest is added to this latter condition, there ensues that most dreaded of all diseases, Consumption, which is directly traceable to this cause—that we have taken into our systems abnormally large quantities of over-soluble starch. It is utterly impossible for the lungs to oxidize this product, no matter how fine they are, therefore the lungs soon become over-worked and devitalized, making it easy for bacteria to multiply in them and cause their disintegration. One of Nature's laws has been violated and payment must be rendered. Any one in this condition who dares to use pre-digested food is doomed beyond the shadow of a doubt.

OBESITY

CATARRH

CONSUMPTION

How much better it would be to take foods as Nature has prepared them. All Physical Culturists know that it is very important to cultivate each muscle, but sometimes they do not realize the importance of cultivating each internal function, that the body may become strong even in its weakest parts. As long as one continues to lead an artificial life, he cannot conscientiously say that he is a rational Physical Culturist (copyright applied for).

Any one doubting the ability of the human being to digest raw starch is invited to call at my office on one of my office days and listen to the experiences of hundreds of patients, who after they had been made miserable by cooked foods, now digest with ease the natural starch, while at the same time they find their systems working harmoniously, manifesting mental, physical and genital vigor. My office hours are: 10 A. M. to 2 P. M. on Tuesdays, Thursdays and Saturdays, and from 6 P. M. to 8 P. M. on Tuesdays and Fridays.

In a future article I will show you how cooking destroys the vital principle in food, thus destroying your vitality.

ATLANTIC CITY

A Unique City by-the-Sea

Atlantic City has no season. It is perennial. It has broken a tradition: that a seashore resort is necessarily a summer resort. It took daring and imagination on the part of the first man who decided to spend his winter vacation at a famed summer place, and even more of the same qualities on the part of the hotel keeper who decided to keep his house open and provide lodgings for whose might follow in the trail blazed by the daring innovator. The experiment succeeded a decade ago. The Gulf Stream made it so. Geographically, Atlantic City is the most favored resort on the North Atlantic coast. Its great temperature regulator is the Gulf Stream, which approaches the land nearer at this point than at any other place north of the Carolina coast. Thus the ocean winds that come breezing out of the east are tempered to the winter sojourner and made almost balmy and free from chill.

Put a pipe in your mouth, jam your hands snugly into your pockets, and take a turn along the board-walk and notice the crowds. But for the absence of the light summer dresses, duck trousers, and straw hats, it might be a cool morning in early summer. Business men, University of Pennsylvania undergraduates, trim young women in light furs and smart wraps, invalids in roller chairs, convalescents making slow progress on the arm of an attendant—all taking advantage of the invigorating ocean breezes.

There are fun and amusement a-plenty for the person who is seeking recreation and not health. The Casino has an excellent ballroom, and a commodious white marble swimming pool of sea water, warmed to a comfortable temperature for bathing, no matter what the season. There are bowling alleys and sun parlors with commanding views of the ocean and esplanade. Three long ocean piers are additional places of resort and amusement. They are kept comfortably heated when the temperature demands. For the large contingent who devote their time to outdoor sports there are the golf links, of which Harry Vardon, the English champion, spoke so highly. The course is owned by the Country Club, but its courtesies are extended to hotel guests. A well-equipped club-house is on the grounds of the club. Fishing is kept up throughout the winter. The Horse Show draws thousands of visitors. To speak of the hotels is hardly necessary. They range from hugh structures equipped with every convenience that luxury can command to quiet villas and boarding-houses. They stand to satisfy the vagaries and demands of any applicant.—*New York Post.*

The New Jersey Central has a double daily service to Atlantic City from New York, leaving the latter city from foot of Liberty Street at 9.40 a.m., 3.40 p.m. Send to C. M. Burt, General Passenger Agent, New York, for illustrated Booklet and Time Table. It's free for the asking.

MEDICAL OPINIONS OF Buffalo Lithia Water

"NOTHING TO COMPARE WITH IT IN PREVENTING URIC ACID DEPOSITS IN THE BODY."

Dr. P. B. Barringer, *Prof. Physiology and Surgery, University of Virginia*: "After more than twenty years' of practice, I have no hesitation in stating that for prompt results I have found **BUFFALO LITHIA WATER** IN PREVENTING URIC ACID DEPOSITS IN THE BODY."

"MAY BE RELIED UPON TO GIVE MOST SATISFACTORY RESULTS."

Dr. Alexander B. Mott, *of New York, Professor of Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital*: "I have made sufficient use of **BUFFALO LITHIA WATER** to be satisfied that it possesses very valuable therapeutic properties. In the Gouty Diathesis, Chronic Inflammation of the Bladder, and other diseases affecting the urinary organs, it may be relied upon to give most satisfactory results."

"THE MOST VALUABLE MINERAL WATER IN USE."

Dr. Graeme M. Hammond, *of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital*: "In all cases of **BRIGHT'S DISEASE** I have found **BUFFALO LITHIA WATER** service in increasing the quantity of urine and in ELIMINATING the ALBUMEN. In certain cases of Melancholia, accompanied by excessive elimination of URATES and URIC ACID, it is often the only remedy necessary. In GOUT and RHEUMATISM it is highly beneficial. **BUFFALO LITHIA WATER** as the most valuable mineral water in use."

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally. Testimonials which defy all imputation or questions sent to any address.

RHEUMATISM

Cured

Without Medicine

Trial Pair of Magic Foot Drafts FREE ON APPROVAL to anybody.

TRY THEM.

Don't take drugs—most medicine isn't fit for the stomach—but try a modern adaptation of a very old principle, and cure yourself.

Almost everyone has soaked his feet in hot water to cure a cold in the head. Magic Foot Drafts open the pores of the feet, the largest in the body, in the same way, stimulating the excretory functions of the skin, and enabling it to throw off the acid impurities from the system through these large pores.

Magic Foot Drafts cure rheumatism in every part of the body. Here is the reason.

Every drop of blood in the body passes every so often through the feet, where the circulatory and nervous systems are exceedingly susceptible.

The Drafts have great power to absorb acid poisons from the blood. Each time a contaminated drop of blood passes through the foot the Drafts absorb a portion of the acid poison, gradually but surely purifying the blood—the only way to permanently cure rheumatism.

If you have rheumatism write us to-day and we will send you a pair of Magic Foot Drafts on free trial. If they relieve you, send us One Dollar. If they don't, keep your money—the risk is ours. We know that they cure to stay cured. Write to-day to the MAGIC FOOT DRAFT COMPANY, R U 14 Oliver Building, Jackson, Mich. Send no money—only your name.

DEAFNESS

CURED

Louisville Man Originates a Simple Little Device That Instantly Restores the Hearing—Fits Perfectly, Comfortably, and Does Not Show.

190-PAGE BOOK FREE TELLS ALL ABOUT IT.

Since the discovery of a Louisville man it is no longer necessary for any deaf person to carry a trumpet, a tube, or any such old-fashioned device, for it is now possible for any one to hear perfectly by a simple invention that fits in the ear and cannot be detected. The honor belongs to Mr. George H. Wilson of Louisville, who was himself deaf, and now hears as well as any one. He calls it Wilson's Common Sense Ear-Drum, is built on the strictest scientific principles, containing no metal of any kind, and is entirely new in every respect. It is so small that no one can see it, but, nevertheless, it collects all sound waves and diverts them against the drum head, causing you to hear perfectly. It will do this even when the natural ear drums are partially or entirely destroyed, perforated, scarred, relaxed, or thickened. It fits any ear from childhood to old age, and, aside from the fact that it does not show, it never causes the hearer irritation, and can be used with comfort day or night.

It will cure deafness in any person, no matter how acquired, whether from catarrh, scarlet fever, typhoid or brain fever, measles, whooping-cough, gathering in the ear, shocks from artillery, or through accidents. It not only cures but stays the progress of deafness and all roaring and buzzing noises. It does this in a simple, sure, and scientific way. The effect is immediate.

Let every person who needs this at once send to the company for its 190 page book, which you can have free. It describes and illustrates Wilson's Common Sense Ear Drums and contains many bonafide letters from numerous users in the United States, Canada, Mexico, England, Scotland, Ireland, Wales, Australia, New Zealand, Tasmania, India. These letters are from people in every station of life—clergymen, physicians, lawyers, merchants, society ladies, etc.—and tell the truth about the benefits to be derived from the use of this wonderful little device; you will find among them the names of people in your own town or state, and you are at liberty to write to any of them you wish and secure their opinion as restoring the hearing to its normal condition.

Write to-day and it will not be long before you are again hearing. Address, for the free book and convincing evidence, Wilson Ear Drum Co., 781 Todd Building, Louisville, Ky., U. S. A.

The Life Story of an Ideal Patriot

"Nathan Hale," by William Ordway Partridge, Sculptor. \$1. Illustrated. Funk & Wagnalls Company, Publishers, New York.

\$1 and what it will do

ONE DOLLAR pays for a membership in the Wanamaker Century Club.

A membership saves you exactly Half the purchase price on a set of the "Century."

It brings you the books, complete, in their quartered oak bookcase and reading desk, without further "cash-down" payment.

It privileges you to pay the Half-price a little at a time—monthly—comfortably.

It thus insures your ownership of the work that is acknowledged to be of MORE PRACTICAL USE than any other ever published—and at the lowest price at which it has ever been offered—anywhere.

That's what \$1. will do if spent wisely and promptly

The Century Dictionary and Cyclopedia and Atlas

is an encyclopedia built like a dictionary—with each of its items in its own alphabetical place instead of hidden in long chapters under some general heading, which was the old-fashioned way. It is the only reference work that is really used *daily* by half a million people in this country alone (and many of them were glad to pay the twice-bigger price which was charged before The Wanamaker Century Club was organized).

The Century is its own reason for its widespread popularity. It encourages its occasional use into a daily habit—*The Century Habit*—which simply means "knowing things without effort."

Ask any Century owner. He will tell you that The Century volumes are the best of all books to work with, to read with, to think with. If you have thought The Century beyond your means, it is no longer so. The Wanamaker Century Club, by its immense selling power, has brought it within the reach of every one. The latest revised edition is controlled by us absolutely. It is unabridged and is the only authorized edition now published by The Century Company.

If you will mail us the Coupon in the Corner

with your name and address written plainly, we will send you a book that will explain to you why The Century is different from any other work of reference; why nearly every one who has found out what it really contains now owns a set,—and why we think *you*, in particular, would be interested. Sending the coupon does not bind you to purchase. It simply gives us the opportunity which we want very much, of putting you in full possession of the details of what we believe to be the greatest book opportunity ever offered.

THE SOCIALIST AND THE PRINCE

By Mrs. Fremont Older

Gertrude Atherton, Author
of "The Conqueror," etc.,
Says:

"I believe this to be one of the big books of 1908 in 'The Socialist and the Prince.' It is rarely that I come upon a book I can not put down, but I let my work go and spent a long morning over it. It is, indeed, a brilliant and interesting book, full of popularity."

Hon. James D. Phelan,
ex-Mayor of San Francisco,
Cal., Says:

"I find it a striking picture, most artistically wrought, of interesting social and political conditions which existed in San Francisco at one of the most critical periods of its history. The cosmopolitan character of the people, the political surprises which constantly have occurred in the past, and the romance which attaches to the place are woven in a most readable style. It is a worthy contribution from the West to the list of excellent books illustrative of American life and manners which have appeared in the last few years, and will, no doubt, be eagerly read."

A Story of California during the Seventies

Full of the throb and movement of real life, with social pleasures, passionate rivalry in love, political plots, street riots, forest idyls, fiery orations, duels, and witty repartee. The author's style is remarkably crisp and racy. The reader is led rapidly from page to page with a rare sense of exhilaration, and a feeling that at last he has found something fresh and unusual.

Frontispiece by Harrison Fisher.
12mo, Cloth. Price, \$1.50.

AT ALL BOOKSTORES

The Commercial Advertiser, New York, Says:

"The three principal actors are vital, living human beings, drawn with such bold, telling strokes that they seem to stand out in clear relief from the printed page. . . . There is a freshness about the style of this book, an originality about the plot, a virility in the character drawing."

U. S. Senator Perkins,
Former Governor of California, Says:

"In depicting the Socialist she has used with great effect the events of the anti-Chinese agitation in San Francisco during the latter 70's, and has truthfully portrayed many of the scenes of those exciting times. She has also shown in what manner the mass of workmen were then gained over to the movement, and how they were subsequently organized into a political power in the state. . . . None the less admirable is her character drawing in the case of the heroine and the 'Prince.' Most of the scenes in which they are the principal actors have great dramatic force."

Vite,
Bon
Garçon!

Soyez vite! Lelise is nervous and tired after the play, and she is not used to waiting. Her merry blue eyes are snapping—What in the world are you bringing us, Garçon? Roast beef! *boeuf roti!* How absurd! I ordered *dindon roti*—or meant to. My mistake? I suppose so. Now Lelise is laughing at me. You'll get no tip to-night, Garçon. I'll have you. . . . Well, I declare, I've clean forgotten again that you are safe in the pages of a book—safe from my threats. Dear me! Pretty little blond Lelise is in the book, too. How ridiculous of me to let my pulse beat so quickly just now! But, I swear, that clever fellow

F. Berkeley Smith

has such a way of putting real, live people into his book that I am actually talking and laughing with them, and even making love to them before I know it. To think that I can sit here in my easy chair and visit with such a charming guide and comrade all the places where fun reigns in Paris, all the little nooks of jollity known only to the initiated! F. Berkeley Smith surely knows how to make me understand

"How Paris Amuses Itself"

Hush! Wasn't that a burst of music and a flash of light and color from the Folies Bergère, as the door just opened and shut? No? It seemed so real. Only another of the many vivid impressions received from this delightful book. More than a hundred pictures, as much alive as the text, heighten these impressions.

To be published in April. Advance orders will be accepted now (Price \$1.50 net, by mail \$1.65, to be filled in order of receipt).

PICTURES OF THE PEOPLE AND LIFE OF THE GREAT
EAST SIDE JEWISH QUARTER OF NEW YORK

The Spirit of The Ghetto

By HUTCHINS HAPGOOD

ISRAEL ZANGWILL says:

"It is the work of one able to interpret what he sees, to understand its rhythms, and finally to divine the deep springs of idealism that transfigure the Ghetto with a poetry that the larger American life often loses."

JOSIAH FLYNT says:

"We are greatly indebted to Mr. Hapgood for the sympathetic intelligence with which he has studied and described this strange eddy in the current of things American."

MARY A. JORDAN says:

"This series of papers belongs characteristically to what may be called literature by documentary evidence, and at once challenges and rewards attention."

Handsomely printed, ornamental covers,
12mo, cloth. With Drawings from Life
by Jacob Epstein. 320 pages. Illustrated.
Price, \$1.35 net; By mail, \$1.50.

"Behind the Scenes" in the
World's Most Famous Bohemia

The Real Latin Quarter of Paris

By F. BERKELEY SMITH

So real are its descriptions that the reader feels that he has taken an actual trip through the Quarter, enjoyed the good cheer at Lavenues, listened to the chansons at Marcel Legay's, looked down upon the giddy whirl of the Bal Bullier, peeped into studios, chatted with models, and seen every nook and corner of this celebrated community.

John W. Alexander: "It is the real thing."

Frederic Remington: "You have left nothing undone."

About 100 original drawings and camera snapshots by the Author, and two caricatures in color by the celebrated French caricaturist Sancha. Ornamental Covers. Water-color Frontispiece by F. Hopkinson Smith.

Price, \$1.20

Funk & Wagnalls Company, Pubs., New York.

The Office Standard Dictionary

Abridged from the Funk & Wagnalls Standard Dictionary. 62,284 vocabulary terms, 1,225 illustrations. Many exclusive educational features. Large 8vo, 923 pp., cloth, leather back, \$2.50; full leather, \$4.

"It is to be preferred to all other dictionaries meant for office or desk use, and for scholars in high schools and academies. It is quite sufficient for the needs of nine readers in ten."—Boston Herald.

FUNK & WAGNALLS COMPANY, PUBS., NEW YORK

ERNEST THOMPSON SETON

(In a letter to the author)

Will you allow a stranger, a lover of all that is good and picturesque in our Indians, to thank you sincerely for giving us the epic of "Kulóskap the Master." My feeling to you for this is the same as it would be toward some heroic fireman who had rushed to the burning Louvre and, at the last moment, rescued the Mona Lisa, the Gobelins Boarhunt, or the Man with the Glove: but for him the world would have lost something priceless, unique, and irreplaceable.

KULOSKAP THE MASTER

And Other Algonkin
Lyrics and Ballads..

By CHARLES GODFREY LELAND, Hon. F. R. S. L.
And JOHN DYNELEY PRINCE, Ph.D.

IN the first four cantos are told the legends of the Indian god Kulóskap, narrating how he created the Indians' world, cared for the interests of his children, dealt with the animal kingdom and punished the sorcerers. The stories take the reader into the heart of nature. In the innermost recesses of the forest he follows the strange doings of wizards, goblins, and witches; he discovers how Kulóskap conquered Akilbimo, the giant bullfrog, who monopolized a village water-supply, how Mikchik, the turtle, a lazy and lucky old rascal, was false to the master, and a hundred other strange and interesting things about the animals; he becomes acquainted with the great wisdom of the master, he finds how Kulóskap granted marvelous gifts and favors to the Indians, how he drove out devil, conquered his enemies and finally was conquered by a babe, and he revels in such exquisite lyrics as those that tell of "The Scarlet Tanager and the Leaf," "The Story of Nipon the Summer," "Lox, the Indian Devil," and others.

A FEW LINES FROM "THE SCARLET TANAGER AND THE LEAF."

"In the earliest time on the greatest mountain
Lived merry Mipis, the Little Leaf;
When spring is coming and sunlight is shining
He climbs a tree, and there, all summer,
Dressed in green he rocks in the branches,
Listens all day to the birds and the breezes,
And goes to sleep to the song of the owl.

"When fall is coming and days are shorter
Mipis dresses himself in scarlet;
Glad and gay in the Indian Summer;
But as the nights grow cold and longer,
He puts on a coat of brown and yellow,
Curls himself up like a bear for winter,
Lets go his hold and falls to the ground;
There he sleeps all under the snowdrift
Till he hears in the spring the blue-bird calling,
And the stream fighting its enemy ice—
Carrying proudly in pieces as prisoners
The foe which kept it a frozen captive,
All the winter under its wigwam.
Then little Mipis, the Leaf, awaking,
Dresses in green and climbs in the sunshine,
Up through a tree, and upon the branches,
Lives as he did the summer before."

Profusely illustrated with half-tones by F. BERKELEY SMITH, ten birch-bark tracings by MR. LELAND, after Indian designs, and a frontispiece in color by EDWIN WILLARD DEMING, the celebrated Indian artist.

12mo, cloth, ornamental covers, illustrated, \$2.00 net; by mail, \$2.17

JUST A HINT

IF you contemplate purchasing an encyclopædia, you will doubtless want to know about the one that is new all through and contains every branch of human knowledge to date. The only new encyclopædia published in English during the last ten years is

THE NEW INTERNATIONAL ENCYCLOPÆDIA

EDITORS:

DANIEL COIT GILMAN, LL.D.

President of Johns Hopkins University (1876-1901). President of Carnegie Institution.

HARRY THURSTON PECK, Ph.D., L.H.D.

Professor in Columbia University.

FRANK MOORE COLBY, M.A.

Late Professor of Economics in New York University.

ASSISTED BY NEARLY 200 EMINENT EDITORS AND CONTRIBUTORS

WE INVITE A COMPARISON

with all other encyclopædias published in the English language.

This present day conception of an ideal encyclopædia gives prominence to the presentation of the most recent events and the latest phases of progress. Not only does The New International Encyclopædia describe anew all the older processes of knowledge, but it deals with Modern Science, History, Sociology, Literature, Business Affairs, Invention, Commercial Interests, Art, etc., as they are known to our modern specialists who have given a life-time to the study of these subjects.

There is exhibited on every page of this new work evidence of thoughtful care and the highest skill in selecting such salient and significant features as belong to an encyclopædia deserving a rightful claim to popular favor.

About 65,000 titles are included, dealing with over 100,000 subjects, more than 30,000 of which are not found in any other general reference encyclopædia in the English language.

Never before has it been attempted to illustrate a work of this character so copiously and so artistically. The plates and maps alone, if printed separately, would make a book larger than The Standard Dictionary.

The Greatest Bible Commentary

FOR LAYMEN, STUDENTS
TEACHERS, PREACHERS

ITS SUPREMACY HAS BEEN ACKNOWLEDGED THROUGHOUT THE WORLD FOR TWO CENTURIES

"Taking it as a whole, and as adapted to every class of readers, this Commentary may be said to combine more excellence than any other work of the kind which was ever written in any language."—ARCHIBALD ALEXANDER, D.D.

**FIRE AND HALF-PRICE
WATER SALE**

MANY other commentaries have been given to the world since this one was first edited, but Matthew Henry's has never been superseded. That it combines more points of advantage than any other work of the kind is the opinion of judicious theologians everywhere. It is intended for the preacher and the layman, and has everywhere proven useful and admirable for all religious workers.

A DISASTROUS FIRE

In an adjoining building last January resulted in the slight damage by water and smoke of nearly \$15,000 worth of our stock, including, among other valuable works, 170 sets of Matthew Henry's Commentary. The Insurance Companies have paid the loss, and we are now able to give LITERARY DIGEST readers the benefit of a cut of one-half from the regular price of these sets. No seriously damaged sets will be sent. We guarantee satisfaction. If the set sent you is not perfectly satisfactory you need not pay a cent for it. So do not hesitate to order because of the damage.

Matthew Henry's Commentary on the entire Bible

**170 SETS
AT HALF PRICE**

We shall be able to select 170 sets which were only very slightly damaged by water or smoke, and which we guarantee to be perfectly satisfactory, but which can not be classed as new stock. These we will sell to DIGEST readers at half price and on very easy little-at-a-time payments.

The work is a People's and Pastor's Commentary and Bible treasure-house. It is invaluable to all Pastors, Sunday-School Teachers, Superintendents, Class Leaders, Christian families, in fact to all who wish to give their Bible intelligent reading and accurate interpretation.

6 Royal Octavo Vols., 4,306 Pages, 100 Illustrations

**SENT PREPAID
ON APPROVAL**

THEN ONLY \$1 A MONTH

The regular price of this 6-volume set is \$18. Sign and send us the coupon below, or a copy of it, and you will receive a selected set for \$1 a month for only 9 months. Send no money now. The books will be sent you on approval. If not satisfactory, you may send them back. We pay the carriage.

**TO-DAY IS THE TIME
OF YOUR
OPPORTUNITY**

"IT IS INCOMPARABLE"

"There is nothing to be compared with Matthew Henry's Commentary for pungent and practical application and teachings of the text."—The Sunday School Times.

"For clear, evangelical, spiritual, and practical Biblical exposition there has been nothing better than this old standard."—Bishop John H. Vincent.

"Matthew Henry's Commentaries will prove, in all the ages to come, to be a perfect mine of gold for laymen."—R. S. MacArthur, D.D.

"For those who desire a common-sense, pithy, quickening, reverent, uplifting commentary on the Bible, nothing is better than Matthew Henry."—Geo. Dana Boardmann, D.D.

"Matthew Henry's Commentary will last for ages because of its thorough evangelism, its loveliness, and its attractiveness."—Ex-Pres. James McCosh, D.D.

FEATURES OF UNAPPROACHED VALUE

A Clear and Convenient Arrangement, Remarkable Spirituality and Purity Packed with Suggestive Material, Concise, Consistent, Comprehensive

"Many Bible students and preachers will be surprised to find the ample treasure of exposition and instruction in a work which has been held to be the standard Protestant commentary in the English tongue."—Bishop F. D. Huntington (Episcopal).
